SPRING AND SEEP CATALOG
Hermosa Project Area

DATE: August 31, 2022 **VERSION: 3.0**

INTRODUCTION

This catalog has been prepared to summarize available information for selected springs and seeps in the Harshaw Creek, Alum and Cox Gulch, Mowry Wash, Adams-Duquesne, Providencia, and Soldier Basin watersheds (**Plate 1**). The springs and seeps included in this catalog were selected based on proximity to South32's Hermosa project.

Identification and monitoring of springs and seeps had been performed as part of ongoing hydrological and biological baseline studies conducted during the period 2016 to present.

Springs/seeps were identified using various public sources of information (e.g., United States Geological Survey topographic maps) and discussions with local stakeholders, and field surveys.

Catalog Format

Spring and seep locations are shown on **Plate 1**.

For each catalog entry, there are 5 sections, which are described below:

Section 1 – General Information: Provides detailed information on the following:

- Naming convention and monitoring history
- Interpretation of groundwater age
- Potential for impacts

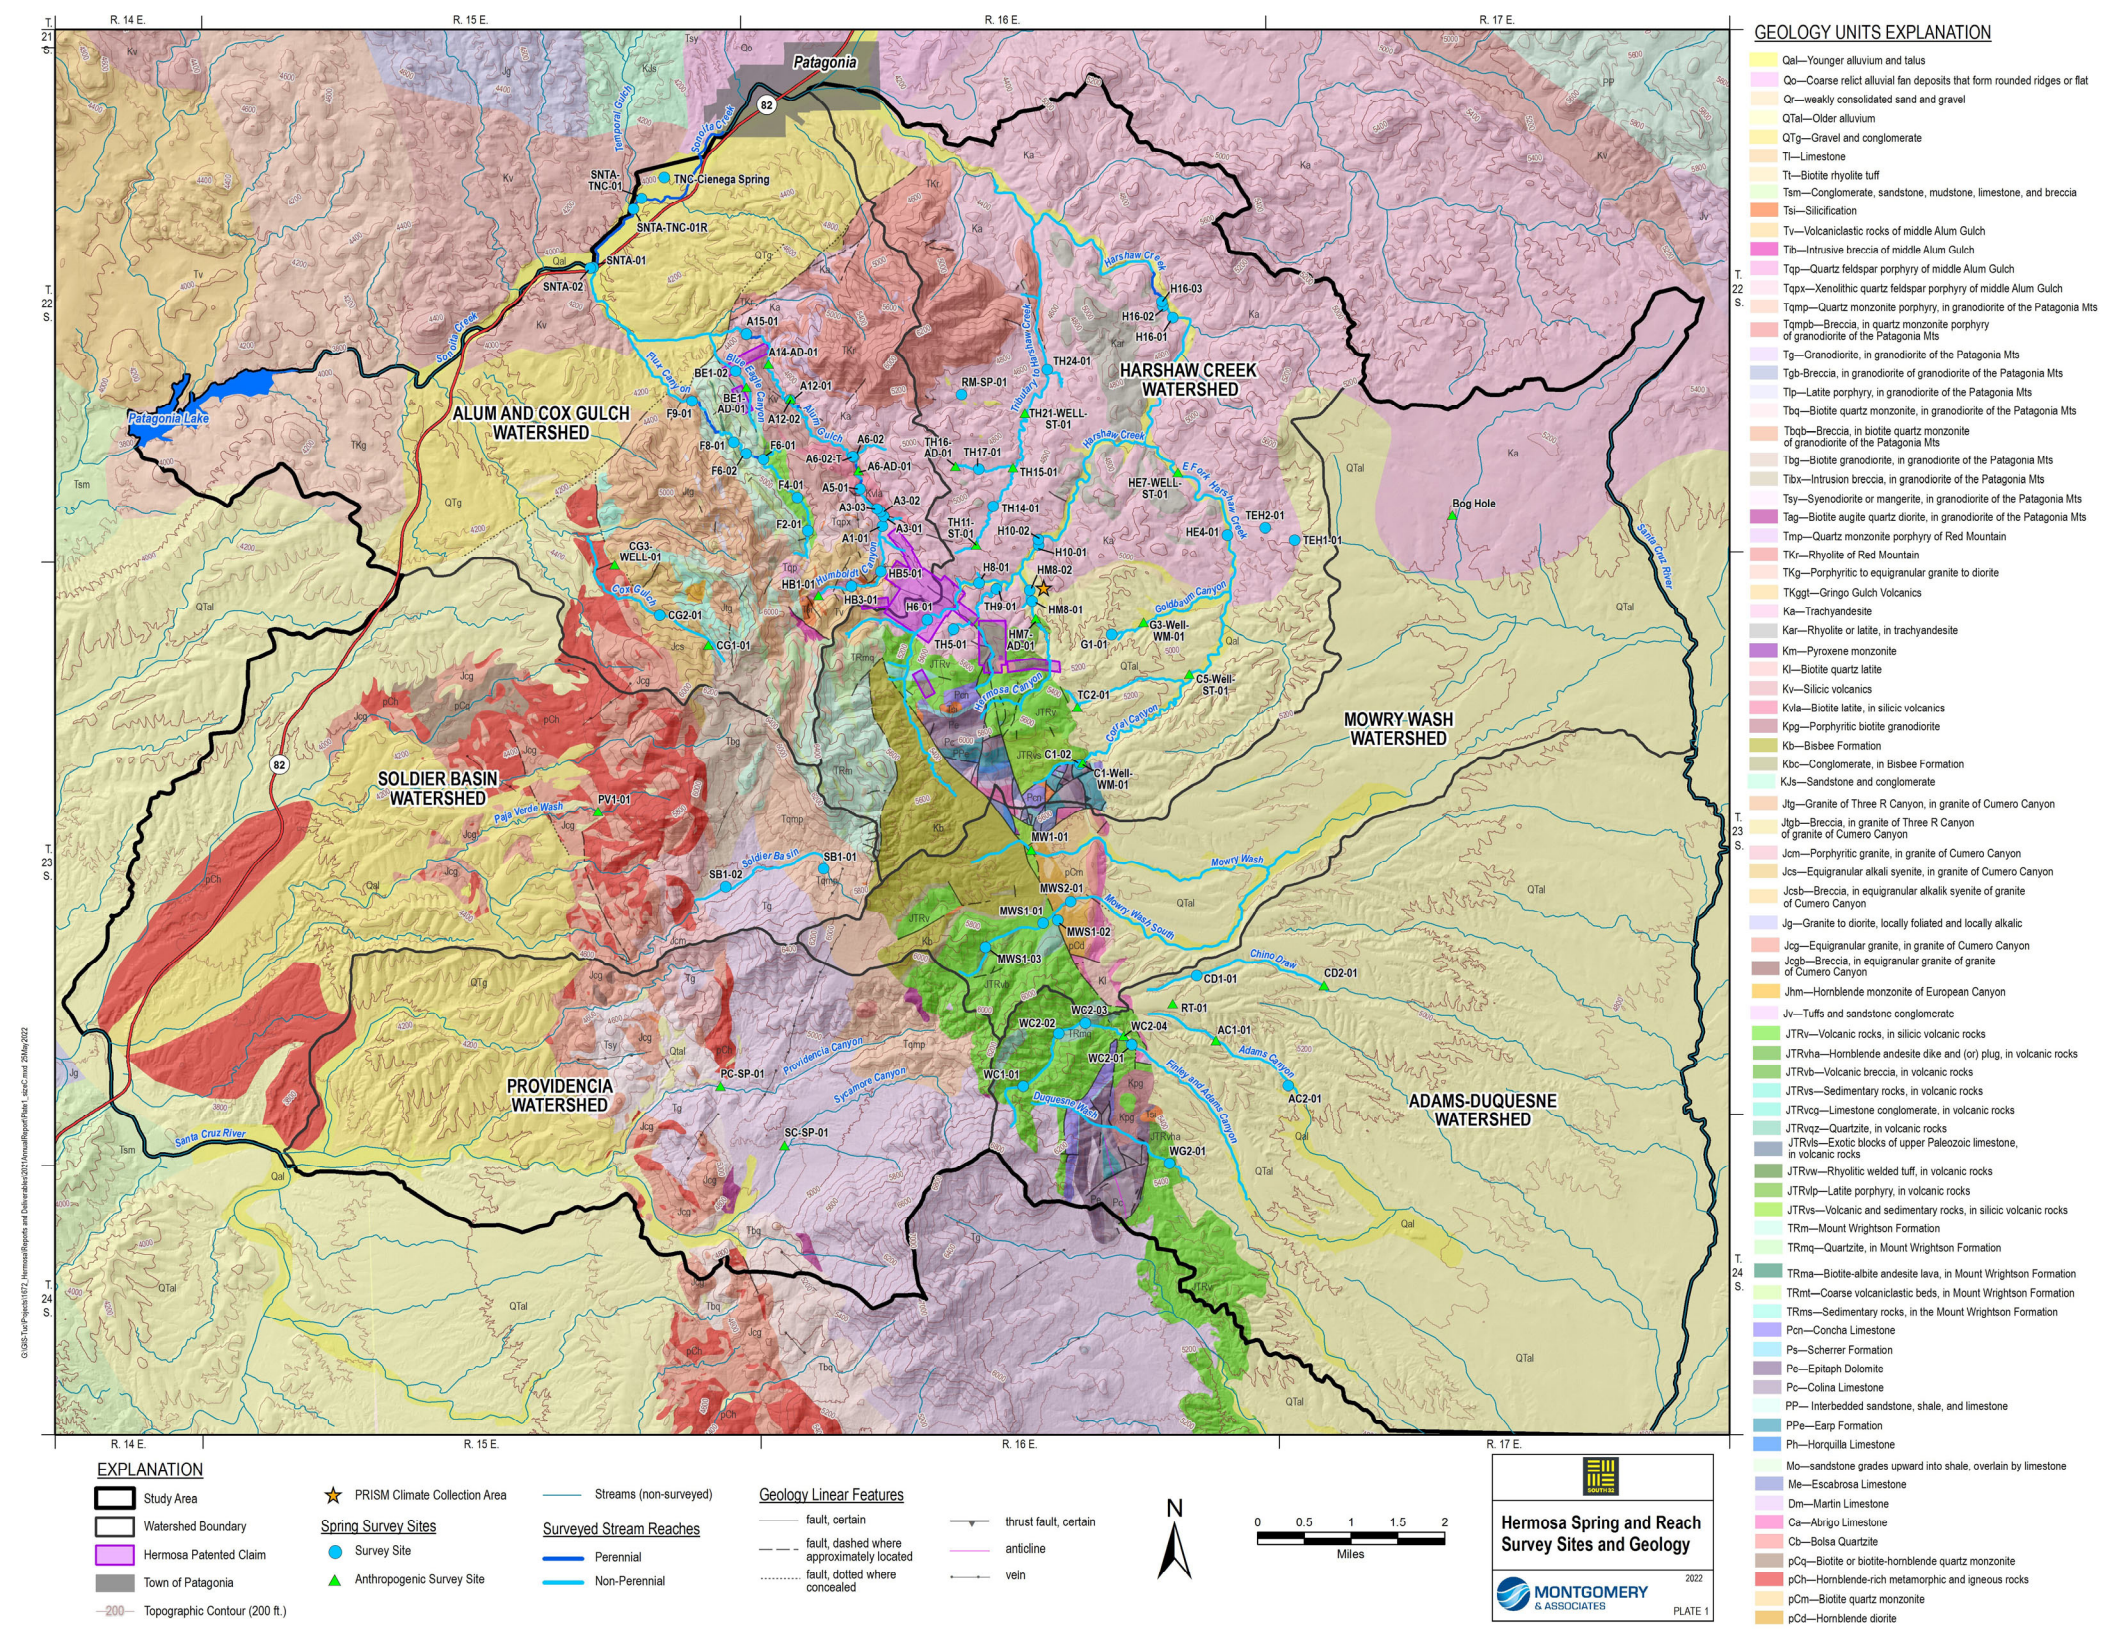
Section 2 – Hydrological Observations: Provides a summary of field water quality parameters and flow measurements during wet and dry monitoring events.

Section 3 – Water Quality Exceedances: A table of constituents listing surface water quality exceedances, if any, during each sampling event.

Section 4 – Aquatic and Vegetation Survey Findings: Provides a summary of flora and fauna observations made during biological surveys and includes general site characteristics, .

Section 5 – Photographs: Provides seasonal photographs showing some of the hydrological and biological features for each site.

This spring and seep catalog is dynamic; springs and seeps may be added, and formatting may be updated in the future.



GEOLOGY UNITS EXPLANATION

- Qal—Younger alluvium and talus
- Qo—Coarse relict alluvial fan deposits that form rounded ridges or flat
- Qr—weakly consolidated sand and gravel
- QTal—Older alluvium
- QTg—Gravel and conglomerate
- Tl—Limestone
- Tt—Biotite rhyolite tuff
- Tsm—Conglomerate, sandstone, mudstone, limestone, and breccia
- Tsi—Silicification
- Tv—Volcaniclastic rocks of middle Alum Gulch
- Tib—Intrusive breccia of middle Alum Gulch
- Tqp—Quartz feldspar porphyry of middle Alum Gulch
- Tqpx—Xenolithic quartz feldspar porphyry of middle Alum Gulch
- Tqmp—Quartz monzonite porphyry, in granodiorite of the Patagonia Mts
- Tqmpb—Breccia, in quartz monzonite porphyry of granodiorite of the Patagonia Mts
- Tg—Granodiorite, in granodiorite of the Patagonia Mts
- Tgb-Breccia, in granodiorite of granodiorite of the Patagonia Mts
- Tlp—Latite porphyry, in granodiorite of the Patagonia Mts
- Tbq—Biotite quartz monzonite, in granodiorite of the Patagonia Mts
- Tbqb—Breccia, in biotite quartz monzonite of granodiorite of the Patagonia Mts
- Tbg—Biotite granodiorite, in granodiorite of the Patagonia Mts
- Tibx—Intrusion breccia, in granodiorite of the Patagonia Mts
- Tsy—Syenodiorite or mangerite, in granodiorite of the Patagonia Mts
- Tag—Biotite augite quartz diorite, in granodiorite of the Patagonia Mts
- Tmp—Quartz monzonite porphyry of Red Mountain
- TKr—Rhyolite of Red Mountain
- TKg—Porphyritic to equigranular granite to diorite
- TKggt—Gringo Gulch Volcanics
- Ka—Trachyandesite
- Kar—Rhyolite or latite, in trachyandesite
- Km—Pyroxene monzonite
- Kl—Biotite quartz latite
- Kv—Silicic volcanics
- Kvla—Biotite latite, in silicic volcanics
- Kpg—Porphyritic biotite granodiorite
- Kb—Bisbee Formation
- Kbc—Conglomerate, in Bisbee Formation
- KJs—Sandstone and conglomerate
- Jtg—Granite of Three R Canyon, in granite of Cumero Canyon
- Jtgb—Breccia, in granite of Three R Canyon of granite of Cumero Canyon
- Jcm—Porphyritic granite, in granite of Cumero Canyon
- Jcs—Equigranular alkali syenite, in granite of Cumero Canyon
- Jcsb—Breccia, in equigranular alkalik syenite of granite of Cumero Canyon
- Jg—Granite to diorite, locally foliated and locally alkalic
- Jcg—Equigranular granite, in granite of Cumero Canyon
- Jcgb—Breccia, in equigranular granite of granite of Cumero Canyon
- Jhm—Hornblende monzonite of European Canyon
- Jv—Tuffs and sandstone conglomerate
- JTRv—Volcanic rocks, in silicic volcanic rocks
- JTRvha—Hornblende andesite dike and (or) plug, in volcanic rocks
- JTRvb—Volcanic breccia, in volcanic rocks
- JTRvs—Sedimentary rocks, in volcanic rocks
- JTRvcg—Limestone conglomerate, in volcanic rocks
- JTRvqz—Quartzite, in volcanic rocks
- JTRvls—Exotic blocks of upper Paleozoic limestone, in volcanic rocks
- JTRvw—Rhyolitic welded tuff, in volcanic rocks
- JTRvlp—Latite porphyry, in volcanic rocks
- JTRvs—Volcanic and sedimentary rocks, in silicic volcanic rocks
- TRm—Mount Wrightson Formation
- TRmq—Quartzite, in Mount Wrightson Formation
- TRma—Biotite-albite andesite lava, in Mount Wrightson Formation
- TRmt—Coarse volcaniclastic beds, in Mount Wrightson Formation
- TRms—Sedimentary rocks, in the Mount Wrightson Formation
- Pcn—Concha Limestone
- Ps—Scherrer Formation
- Pe—Epitaph Dolomite
- Pc—Colina Limestone
- PP— Interbedded sandstone, shale, and limestone
- PPe—Earp Formation
- Ph—Horquilla Limestone
- Mo—sandstone grades upward into shale, overlain by limestone
- Me—Escabrosa Limestone
- Dm—Martin Limestone
- Ca—Abrigo Limestone
- Cb—Bolsa Quartzite
- pCq—Biotite or biotite-hornblende quartz monzonite
- pCh—Hornblende-rich metamorphic and igneous rocks
- pCm—Biotite quartz monzonite
- pCd—Hornblende diorite

EXPLANATION

- Study Area
- Watershed Boundary
- Hermosa Patented Claim
- Town of Patagonia
- 200 Topographic Contour (200 ft.)
- PRISM Climate Collection Area

Spring Survey Sites

- Survey Site
- Anthropogenic Survey Site

- Streams (non-surveyed)

Surveyed Stream Reaches

- Perennial
- Non-Perennial

Geology Linear Features

- fault, certain
- fault, dashed where approximately located
- fault, dotted where concealed
- thrust fault, certain
- anticline
- vein

Hermosa Project Spring and Seep Survey Sample Site Summary, Patagonia, Arizona

Site ID	A1-01	**Interpretation of Groundwater Age:** Inconclusive, may be a mix of shallow and deeper waters.
Watershed	Alum Gulch	
Monitoring Period	12/2016 - 12/2021	**Potential Impacts/Effects:** Flows observed at this site have ranged from zero to 34.2 gpm. No changes are predicted at this site.
Number of Visits	13	

Flows and Field Parameters (pH, Temp, SC)

Water Quality Exceedances

Dry Season		Wet Season	
Date	**Parameter**	**Date**	**Parameter**
5/24/2018	Iron, lead, nickel, cadmium, copper, zinc, selenium, pH	12/29/2016	Lead, nickel, cadmium, copper zinc, pH
5/28/2019	Lead, cadmium, copper, zinc, selenium, pH	10/23/2017	Lead, nickel, cadmium, copper, zinc, selenium, pH
6/12/2020	Iron, lead, nickel, cadmium, copper, zinc, selenium, pH	11/27/2018	Lead, cadmium, copper, zinc, pH
1/18/2021	Site was dry	12/3/2019	Cyanide, lead, cadmium, copper, zinc, pH
5/19/2021	Site was dry	10/15/2020	Wet season 2020 samples were not collected due to Covid-19 restrictions
		11/16/2021	Lead, cadmium, copper, zinc, pH, DO

Aquatic and Vegetation Survey Findings: This site is located within a section of Alum Gulch with some exposed bedrock. Water is generally present pre-monsoon and during monsoon in shallow flowing runs. Riparian obligate rushes (*Juncus* spp.) occur along perimeter where soil is present. Overstory tree coverage is limited to oaks [*Quercus* spp.] with no riparian tree species present. Invasive plants observed include Lehmann lovegrass (*Eragrostis lehmanniana*) and weeping lovegrass (*Eragrostis curvula*). Aquatic invertebrates, including beetles, boatmen, and backswimmers, have been observed. No aquatic vertebrates have been observed.

5/19/2021	Lead, cyanide, cadmium, copper, nickel, zinc, iron, pH, DO		

Aquatic and Vegetation Survey Findings: Site is located in sandy, gravelly section of Alum Gulch lined with a thick cover of riparian obligate plants including rushes (*Juncus* spp.) as well as deergrass (*Muhlenbergia rigens*) and Johnsongrass (*Sorghum halepense*). Overstory tree coverage is limited to upland tree species (oak [*Quercus* sp.] and juniper [*Juniperus* sp.]) within the drainage. Drainage and hillside vegetation dominated by oak woodland and grasses. Water present pre-monsoon and during monsoon in shallow flowing runs. Aquatic invertebrates including beetles, boatmen, and backswimmers have been observed. No aquatic vertebrates have been observed. Deer tracks near the site have been noted. Invasive plant species observed are Lehmann lovegrass (*Eragrostis lehmanniana*) and Bermudagrass (*Cynodon dactylon*).

5/19/2021	Dry		

Aquatic and Vegetation Survey Findings: Bedrock portion of Alum Gulch. No riparian overstory tree species present at the site. Some riparian obligate rushes (*Juncus* spp.) present along perimeter where soil is present. Typically dry during pre-monsoon visits (May and June). When water is present, it is available in pools and runs of shallow surface flow. Aquatic beetles and boatmen have been observed. No aquatic vertebrates have been observed. Drainage and hillside vegetation dominated by oak woodland. Invasive plant species observed are Lehmann lovegrass (*Eragrostis lehmanniana*) and Bermudagrass (*Cynodon dactylon*).

Site ID	A6-02T
Watershed	Alum Gulch
Monitoring Period	05/2018 - 12/2021
Number of Visits	11

Interpretation of Groundwater Age: Fairly consistent, modern, and lightly evaporative. Source is primarily surface water, may have a groundwater contribution during the dry season.

Potential Impacts/Effects: Flows observed at this site have ranged from 0 gpm to 9.4 gpm. In the first 4 years, there may be up to 0.01 gpm decrease in flow.

Aquatic and Vegetation Survey Findings: This site is located at an adit with a concrete spring box that retains water at the adit entrance within Alum Gulch. Rushes (*Juncus* spp.), a riparian obligate genus, and deergrass (*Muhlenbergia rigens*) are present at the adit opening. Overstory cover dominated by oak (*Quercus* spp.) with individual Fremont cottonwood (*Populus fremontii*), and Mexican pinyon (*Pinus cembroides*) present. Invasive plants observed include Bermudagrass (*Cynodon dactylon*) and horehound (*Marrubium vulgare*). Aquatic beetles have been observed. No aquatic vertebrates have been observed.

Aquatic and Vegetation Survey Findings: Site is a seep located in exposed bedrock section of a tributary to Alum Gulch. When water is present, it is typically available in shallow pools. Moss is present within the drainage bottom. Emory oak (*Quercus emoryi*) and Toumey oak (*Quercus toumeyi*) provide limited overstory tree coverage. Generally, aquatic beetles, boatmen, and backswimmers are present within the Alum Gulch drainage. No aquatic vertebrates have been observed at this site.

Aquatic and Vegetation Survey Findings: This site is located at an adit within a rocky section of Alum Gulch. Water is present in the adit and discharges into the drainage. A large moss mat and some riparian obligate rushes (*Juncus* spp.) are present at the adit entrance. Although there is no overstory canopy at the site, overstory tree species along the drainage are dominated by oak (*Quercus* spp.) and Chihuahuan pine (*Pinus leiophylla*). Aquatic invertebrates observed include damselflies, beetles, boatmen, and backswimmers. No aquatic vertebrates have been observed.

Aquatic and Vegetation Survey Findings: This site is located in a bedrock section near downstream extent of Alum Gulch. Water is present in series of pools and runs. The site supports very little vegetation, but where pockets of soil exist in the bedrock, Baltic rush (*Juncus balticus*), a riparian obligate species, beargrass (*Nolina macrocarpa*), and moss occur sparingly. Although there is no overstory canopy at the site, overstory trees along the drainage are dominated by oak (*Quercus* spp.). Non-native annual rabbitsfoot grass (*Polypogon monspeliensis*) and invasive Lehmann lovegrass (*Eragrostis lehmanniana*) have been observed. Aquatic invertebrates observed within the Alum Gulch drainage include beetles, boatmen, and backswimmers. No aquatic vertebrates have been observed.

Aquatic and Vegetation Survey Findings: This site is a large earthen stock tank located within Adams Canyon drainage. Two willow trees (*Salix* sp.) occur as emergent and canopy vegetation for the tank. Perimeter vegetation is dominated by non-native barnyard grass (*Echinochloa crus-galli*) and riparian obligate spikerush (*Eleocharis* sp.). The upland overstory vegetation is dominated by Emory oak (*Quercus emoryi*). Invasive Bermudagrass (*Cynodon dactylon*) and American bullfrogs (*Lithobathes catesbeianus*) have been observed at this site.

Aquatic and Vegetation Survey Findings: This site is located in a rocky, gravelly section of Adams Canyon drainage. This site was dry during one visit in 2019 and another in 2020. The overstory is dominated by oak (*Quercus* spp.) with some alligator juniper (*Juniperus deppeana*) and Arizona walnut (*Juglans major*) present. Dominant understory vegetation includes poison ivy (*Toxicodendron radicans*), grasses (*Aristida* sp.), pinyon ricegrass (*Piptochaetium fimbriatum*), and bullgrass (*Muhlenbergia emersleyi*). Invasive weeping lovegrass (*Eragrostis curvula*) has been observed. No aquatic invertebrates or vertebrates have been observed. Heavy grazing occurs at this site.

Aquatic and Vegetation Survey Findings: This feature is a seep located within a section of exposed bedrock in Blue Eagle Canyon. Water is present in small pools. Herbaceous ground cover is dominated by riparian obligate Baltic rush (*Juncus balticus*). Also present is rockloving spikemoss (*Selaginella rupincola*) and sotol (*Dasylirion wheeleri*). Overstory vegetation is dominated by oaks (*Quercus* spp.). Aquatic invertebrates observed include backswimmers. No aquatic vertebrates have been observed.

Aquatic and Vegetation Survey Findings: This site is located at an adit within Blue Eagle Canyon with a rocky berm that dams water at the adit entrance. The site does not support emergent or perimeter vegetation. Oaks (*Quercus* spp.) dominate the overstory within the adjacent drainage. Rockloving spikemoss (*Selaginella rupincola*), hopbush (*Dodonaea viscosa*), and bullgrass (*Muhlenbergia emersleyi*) were also noted near the site. Aquatic invertebrates observed include beetles, boatmen, and backswimmers. No aquatic vertebrates have been observed.

Aquatic and Vegetation Survey Findings: Ponded water fills massive Cienega in dammed drainage. When water is present, water ponds in the area about 500 feet long and 700 feet wide. Adjacent vegetation is semidesert grassland with scattered Fremont cottonwoods (*Populus fremontii*). During the 05/27/21 visit, a dead Sonoran mud turtle (*Kinosternon sonoriense*) and a monarch butterfly (*Danaus plexippus*) were observed.

Aquatic and Vegetation Survey Findings: This site occurs in a section of exposed bedrock within the Corral Canyon drainage. The site was dry during pre-monsoon visits in 2019, 2020, and 2021. The site is dominated by deergrass (*Muhlenbergia rigens*), alderleaf mountain mahogany (*Cercocarpus montanus*), Wright's silktassel (*Garrya wrightii*), and bulb panicgrass (*Panicum bulbosum*). Although no overstory tree cover exists at the site, Arizona white oak (*Quercus arizonica*) occurs along the drainage. Trace amounts of cupgrass (*Eriochloa* sp.) and seep monkeyflower (*Mimulus guttatus*), a wetland associated plant, were noted. Non-native beardless rabbitsfoot grass (*Polypogon viridis*) has been noted. No aquatic invertebrates or vertebrates have been observed.

Aquatic and Vegetation Survey Findings: This site is an above ground, metal, rectangular stock drinker (approx. 3m x 1m) fed by an adjacent windmill and well system in Corral Canyon. Submerged algae and *Chara* sp. have been observed within the drinker. The site supports no emergent vegetation and only limited perimeter vegetation in the form of cane bluestem (*Bothriochloa barbinodis*) and some Rocky Mountain rush (*Juncus saximontanus*). Upland vegetation surrounding the site is dominated by alligator juniper (*Juniperus deppeana*) and catclaw mimosa (*Mimosa aculeaticarpa* var. *biuncifera*). Aquatic beetles, water boatmen, backswimmers, snails, water striders, and dragonfly larvae have been observed. Invasive American bullfrog (*Lithobathes catesbeianus*) and black-necked gartersnake (*Thamnophis cyrtopsis*) have been observed at this drinker.

Aquatic and Vegetation Survey Findings: Water flows from an adit on the eastern side of the canyon in upper Cox Gulch, staining the ground surface yellow-orange at the adit entrance. The adit entrance is mostly bare of vegetation; however, water present at entrance supports algae. The overstory cover is dominated by Emory oak (*Quercus emoryi*) in the immediate surrounding area. Aquatic beetles have been present at the adit entrance, but no aquatic vertebrates have been observed. Vertebrate wildlife or sign observed included Mearn's quail (*Cyrtonyx montezumae*) and deer.

Aquatic and Vegetation Survey Findings: Water seeps from granite joints and flows atop bedrock outcrop in Cox Gulch. Steep and terraced channel with several tinajas. Vegetation is predominantly rushes (*Juncus balticus*) and mosses, with an overstory of Emory oak (*Quercus emoyi*). Invasive Lehmann lovegrass occurs (*Eragrostis lehmanniana*). Aquatic beetles and backswimmers have been present. During the site visit on 06/01/2021, Mexican jays (*Aphelocoma wollweberi*) and Dusky-capped flycatchers (*Myiarchus tuberculifer*) were observed in the vicinity.

Aquatic and Vegetation Survey Findings: This site is located in rocky and cobbly section of upper Flux Canyon with exposed bedrock. Generally, water is present in shallow pools. Moss is present in the drainage bottom on exposed bedrock. Little to no understory or herbaceous cover exists. Limited overstory tree coverage is dominated by oak (*Quercus* spp.) and Mexican pinyon (*Pinus cembroides*). Aquatic invertebrates previously noted within the Flux Canyon drainage including beetles, boatmen, backswimmers, dragonflies, and damselflies. No aquatic vertebrates have been observed.

Aquatic and Vegetation Survey Findings: This site is located in cobbly and gravelly section of Flux Canyon with some exposed bedrock. Generally, water is present in shallow, isolated pools near bedrock. Rocky Mountain rush (*Juncus saximontanus*), a riparian obligate species, plains lovegrass (*Eragrostis intermedia*), and bullgrass (*Muhlenbergia emersleyi*) are dominate perimeter vegetation along the drainage bottom. Seep monkeyflower (*Mimulus guttatus*), a wetland associated plant, was noted at this site. Green sprangletop (*Leptochloa dubia*) and other grasses dominate the adjacent hillsides. Arizona white oak (*Quercus arizonica*) provides the limited amount of overstory tree coverage at this site. Invasive plant species observed includes Lehmann lovegrass (*Eragrostis lehmanniana*). Aquatic invertebrates previously noted within the Flux Canyon drainage including beetles, boatmen, backswimmers, dragonflies, and damselflies. No aquatic vertebrates have been observed.

Aquatic and Vegetation Survey Findings: Site is located in rocky and cobbly section of Flux Canyon with exposed bedrock. Generally, water is present in shallow pools. Aquatic invertebrates including beetles, boatmen, and damselflies observed. No aquatic vertebrates have been observed. Livestock (scat) and deer (tracks) sign present. Little to no overstory tree coverage is present within the drainage. Emergent and perimeter vegetation is dominated by riparian obligate rushes (*Juncus* spp.), Bermudagrass (*Cynodon dactylon*), and bullgrass (*Muhlenbergia emersleyi*). Drainage lacks riparian vegetation. North-facing slopes are dominated by upland tree and shrub species (oaks [*Quercus* spp.], junipers [*Juniperus* spp.], and hopbush [*Dodonaea viscosa*]), while south-facing slopes are dominated by grasses with sotol (*Dasylirion wheeleri*) and Palmer agave (*Agave palmeri*) present. Invasive plant species observed are Bermudagrass (*Cynodon dactylon*).

Aquatic and Vegetation Survey Findings: Site is located in rocky and bouldery section of lower Flux Canyon. Generally, water is present in shallow pools. Aquatic beetles and boatmen have been observed. No aquatic vertebrates observed have been observed. Deer tracks have been noted at this site. No overstory tree coverage is present at this site within the drainage. Emergent and perimeter vegetation is dominated by riparian obligate *Juncus* spp., Bermudagrass (*Cynodon dactylon*), bullgrass (*Muhlenbergia emersleyi*), and deergrass (*Muhlenbergia rigens*). Drainage lacks riparian tree vegetation. North-facing slopes are dominated by Emory oak (*Quercus emoryi*) and hopbush (*Dodonaea viscosa*), while south-facing slopes are dominated by grasses. Invasive plant species observed are Lehmann lovegrass (*Eragrostis lehmanniana*) and Bermudagrass (*Cynodon dactylon*).

Aquatic and Vegetation Survey Findings: This site is located within exposed bedrock in Goldblaum Canyon. Water is present in series of small tinajas. This site does not support any emergent or perimeter vegetation. No overstory tree species occur at this site. Trace vegetation noted nearby include Ipomopsis *(Ipomopsis* sp.) and deergrass (*Muhlenbergia rigens*). Canyon treefrog (*Hyla arenicolor*) have been observed at this site.

Aquatic and Vegetation Survey Findings: This site consists of a metal, circular stock drinker (approx. 1.8m in diameter) located in Goldbaum Canyon. The drinker is fed by an adjacent windmill and well. There is some accumulated silt along the bottom of the drinker. Submerged algae (*Chara* sp.) is typically present in this drinker. No overstory vegetation is present. Invasive Bermudagrass (*Cynodon dactylon*) occurs around the base of the drinker. Aquatic invertebrates observed include beetles, backswimmers, boatmen, dragonflies, water scorpion, leeches, and snails. No aquatic vertebrates or herpetofauna have been observed. Livestock has been observed around the stock tank and the site is heavily grazed.

Aquatic and Vegetation Survey Findings: Feature consists of a relic dam that has silted in along Harshaw Creek. A pipe driven into the bottom of the dam allows for the passage of water within the alluvium behind the dam to the downstream drainage. During monsoons, flowing water is consistently present below the dam. Aquatic invertebrates but no aquatic vertebrates have been observed. Drainage substrate is mix of bedrock, boulders, gravel, and sand. Arizona white oak (*Quercus arizonica*), alligator juniper (*Juniperus deppeana*), and Fremont cottonwood (*Populus fremontii*) dominate the overstory. Understory vegetation includes deergrass (*Muhlenbergia rigens*), silktassel (*Garrya wrightii*), Arizona grape (*Vitis arizonica*), seepwillow (*Baccharis salicifolia*), and skunkbush sumac (*Rhus trilobata*).

Aquatic and Vegetation Survey Findings: This site is located in a section of Harshaw Creek with gravely, sandy substrate and bedrock constrictions. When water is present, it is typically available in shallow pools. Limited herbaceous vegetation cover is dominated by deergrass (*Muhlenbergia rigens*) and other perennial grasses *(Poaceae* family). Riparian overstory tree cover is dominated by Fremont cottonwood (*Populus fremontii*) and Arizona sycamore (*Platanus wrightii*). Velvet mesquite (*Prosopis velutina*) and alligator juniper (*Juniperus deppeana*) are also present in the midstory. Non-native annual rabbitsfoot grass (*Polypogon monspeliensis*) has been observed. Aquatic invertebrates along this section of the drainage generally include boatmen, damselflies, beetles and water striders. No aquatic vertebrates have been observed.

Aquatic and Vegetation Survey Findings: Located in wetted section of Harshaw Creek. Willows (*Salix* spp.) and Arizona sycamore (*Platanus wrightii*) are dominant riparian overstory tree species while seepwillow (*Baccharis salicifolia*), spikerush (*Eleocharis* sp.), southwestern annual saltmarsh aster (*Symphyotrichum expansum*), Johnsongrass (*Sorghum halepense*), deergrass (*Muhlenbergia rigens)*, and dock (*Rumex* sp.) are dominant emergent vegetation. Upland vegetation is characterized as oak (*Qurecus* spp.) and juniper (*Juniperus* spp.) woodlands.

Water is present during pre-monsoon and monsoon surveys. Longfin dace (*Agosia chrysogaster*), canyon tree frog (*Hyla arenicolor*) tadpoles, and black-necked gartersnakes (*Thamnophis cyrtopsis*) have been observed along this wetted stretch of Harshaw. Aquatic beetles, boatmen, backswimmers, dragonflies, damselflies, mayflies, waterscorpions, belostomatids, and snails have been observed. Invasive plants noted include Johnsongrass (*Sorghum halepense*), common mullein (*Verbascum thapsus*), Bermudagrass (*Cynodon dactylon*), gummy lovegrass (*Eragrostis curtipedicellata*), Lehmann lovegrass (*Eragrostis lehmanniana*), cockspur grass (*Echinochloa* spp.), yellow bluestem (*Bothriochloa ischaemum*), Sahara mustard (*Brassica tournefortii*), and saltcedar (*Tamarisk* spp.).

Hermosa Project Spring and Seep Survey Sample Site Summary, Patagonia, Arizona

Site ID	H16-03	**Interpretation of Groundwater Age:** Consistently lightly evaporative and modern, no deep groundwater source.
Watershed	Harshaw Creek	
Monitoring Period	11/2017-12/2021	**Potential Impacts/Effects:** Flows observed at this site have ranged from near 0 to 180 gpm. Once discharge of treated water begins in Harshaw, this spring is augmented by surface water discharge on the order of 3300 gpm.
Number of Visits	12

Aquatic and Vegetation Survey Findings: This site is located in a wetted section of Harshaw Creek with gravelly and sandy substrate. Water is available in shallow riffles and runs. Goodding's willow (*Salix gooddingii*) and Fremont cottonwood (*Populus fremontii*) are the dominant riparian overstory tree species while seepwillow (*Baccharis salicifolia*) and riparian obligate spikerush (*Eleocharis* sp.) are dominant emergent vegetation. Wetland associated plants, cattail (*Typha* sp.) and monkeyflower (*Mimulus* sp.), have been observed. Non-native annual rabbitsfoot grass (*Polypogon monspeliensis*) and invasive plants, Johnsongrass (*Sorghum halepense*) and saltcedar (*Tamarix ramossisima*), have been noted. Canyon treefrog (*Hyla arenicolor*), black-necked gartersnake (*Thamnophis cyrtopsis*), and longfin dace (*Agosia chrysogaster*) have been observed in this portion of Harshaw Creek. Aquatic beetles, boatmen, backswimmers, dragonflies, damselflies, mayflies, water scorpions, belostomatids, and snails have been observed.

Aquatic and Vegetation Survey Findings: This feature is located at a well-head in Humboldt Canyon where seepage results in a shallow surface water in the road and discharges to adjacent drainage. Riparian obligate Baltic rush (*Juncus balticus*), submerged algae, and moss are the predominate vegetation cover at the site. Silverleaf oak (*Quercus hypoleucoides*) and Chihuahua pine (*Pinus leiophylla*) provide overstory cover. Non-native annual rabbitsfoot grass (*Polypogon monspeliensis*) has been noted. Aquatic beetles and dragonfly larvae have been observed. No aquatic vertebrates have been observed.

Aquatic and Vegetation Survey Findings: This site is a metal stock drinker associated with an adjacent solar well and closed cistern, located within the East Fork of Harshaw Creek. Invasive Bermudagrass (*Cynodon dactylon*) dominates the site with alkali sacaton (*Sporobolus airoides*) also present. No overstory canopy cover occurs at the site. Aquatic invertebrates observed in this drinker include backswimmers, boatmen, beetles, and dragonflies. No aquatic vertebrates have been observed. Cattle and grazing are present on adjacent land.

Aquatic and Vegetation Survey Findings: This site is located at an adit along the eastern wall of Hermosa Canyon with a built-in spring box. This site was dry during site visits in 2019 and 2020. The moss mat at the adit entrance is desiccated. Bullgrass (*Muhlenbergia emersleyi*), canyon grape (*Vitis arizonica*), and California buckthorn (*Frangula californica*) dominate the limited herbaceous cover within the drainage bottom. Overstory tree cover is dominated by Arizona sycamore (*Platanus wrightii*), a preferential riparian tree species, and netleaf hackberry (*Celtis reticulata*). No aquatic invertebrates, or vertebrates have been observed in recent years.

Aquatic and Vegetation Survey Findings: This site is located within a silty and cobbly portion of Hermosa Canyon. The site contains little herbaceous cover, limited to perennial grasses (*Poaceae* family). Overstory vegetation is dominated by riparian trees including Arizona sycamore (*Platanus wrightii*), Fremont cottonwood (*Populus fremontii*), and coyote willow (*Salix exigua*). Invasive tree-of-heaven (*Ailanthus altissima*) has been observed. No aquatic invertebrates or vertebrates have been observed at this site.

Aquatic and Vegetation Survey Findings: This site is located within rocky/gravelly section of south Mowry Wash. Deergrass (*Muhlenbergia rigens*) is the dominate perimeter vegetation at this site with pinyon ricegrass (*piptochaetium fimbriatum*), and riparian obligates, spikerush (*Eleocharis* sp.), rushes (*Juncus* spp.), and seep monkeyflower (*Mimulus guttatus*), are also present. Other understory shrub vegetation noted include skunkbush (*Rhus trilobata*) and Wright's silktassel (*Garrya wrightii*). Overstory vegetation is dominated by alligator juniper (*Juniperus deppeana*), Emory oak (*Quercus emoryi*), and Mexican pinyon (*Pinus cembroides*). Non-native annual rabbitsfoot grass (*Polypogon monspeliensis*) and invasive weeping lovegrass *(Eragrostis curvula*) have been observed. Aquatic invertebrates observed along this drainage include beetles and backswimmers. No aquatic vertebrates have been observed at this site.

Aquatic and Vegetation Survey Findings: Water seeps from alluvium behind the concrete dam and flows atop volcanic bedrock/alluvium channel. This is a surface water section of Mowry Wash. Aquatic beetles have been observed. The dominant vegetation is Madrean oak woodland, dominated by alligator juniper (*Juniperus deppeana*) and Mexican pinyon (*Pinus cembroides*). No invasive plant species were noted, but one USFS sensitive species, Sonoran nose burn (*Tragia laciniata*), has been observed. Deer tracks and livestock sign has been noted.

Aquatic and Vegetation Survey Findings: This site is located within rocky/gravelly section of south Mowry Wash with some bedrock outcrop constrictions. Threeawn (*Aristida* sp.) is the dominate perimeter vegetation at this site with deergrass (*Muhlenbergia rigens*), pointleaf manzanita (*Arctostaphylos pungens*), and panicgrass (*Panicum* sp.). Riparian obligates, Mexican rush (*Juncus mexicana*) and spikerush (*Eleocharis* sp.), and seepwillow (*Baccharis salicifolia*) were also noted at the site. This site lacks tree canopy cover, however, overstory vegetation adjacent to the site is dominated by Emory oak (*Quercus emoryi*). Non-native annual rabbitsfoot grass (*Polypogon monspeliensis*) and invasive plants, Lehmann lovegrass (*Eragrostis lehmanniana*) and weeping lovegrass (*Eragrostis curvula*) have been observed. Aquatic invertebrates observed along this drainage include beetles and backswimmers. No aquatic vertebrates have been observed at this site.

Aquatic and Vegetation Survey Findings: Also called Shannon Spring, water pools in the shaft on the southern side of Providencia canyon. A functioning submersible solar pump with polyline tubing in all directions resides at the site. Pumped water runs up the canyon side to a cistern about 500 ft up the hillside. The tubing then runs back down and across the canyon to the cattle drinker. The predominant vegetation is consistent with the Madrean oak woodland, with poison ivy (*Toxicodendron radicans*) and velvet ash (*Fraxinus velutina*) surrounding the cistern. Invasive Bermudagrass (*Cynodon dactylon*) is present. Aquatic beetles have been observed, but no aquatic herpetofauna has been observed.

Aquatic and Vegetation Survey Findings: Ridge Tank, a large earthen tank, is located on the ridgetop divide between Adams Canyon and Chino Draw. California bulrush (*Schoenoplectus californicus*), a wetland associated species, is present as emergent vegetation. Hairy waterclover (*Marsilea vestita*), a wetland associated species is present as floating vegetation and algae as submerged vegetation. Riparian obligates, spikerush (*Eleocharis* sp.) and Baltic rush (*Juncus balticus*), dominate the perimeter of the tank. Upland overstory vegetation surrounding the tank is dominated by juniper (*Juniperus* spp.) and pointleaf manzanita (*Arctostaphylos pungens*). Invasive plants observed at this site include Lehmann lovegrass (*Eragrostis lehmanniana*), giant reed (*Arundo donax*), and Bermudagrass (*Cynodon dactylon*). Aquatic invertebrates including beetles, damselflies, dragonflies, water scorpions, backswimmers, and snails have been observed. Aquatic vertebrates observed include the black-necked gartersnake (*Thamnophis cyrtopsis*). Non-native sunfish (*Centrarchidae family*) and the invasive American bullfrog (*Lithobates catesbeianus*) have also been noted at this site.

Aquatic and Vegetation Survey Findings: Colluvial dam, followed by series of terraces with alluvial deposition. A cobble and concrete container was built into the eastern hillside. Vegetation is Madrean evergreen woodland with a riparian overstory dominated by Fremont cottonwood (*Populus fremontii*). Invasive Lehmann lovegrass (*Eragrostis lehmanniana*) was present. Aquatic beetles were observed. No aquatic herpetofauna have been observed.

Aquatic and Vegetation Survey Findings: This concrete drinker is located in the upstream extent of an unnamed tributary to Harshaw Creek. Understory vegetation is dominated by sumac (*Rhus* spp.), Wright's silktassel (*Garrya wrightii*), pinyon ricegrass (*Piptochaetium fimbriatum*), and bull grass (*Muhlenbergia emersley*). Overstory vegetation is dominated by Arizona white oak (*Quercus arizonica*) and alligator juniper (*Juniperus deppeana*). Invasive plant species observed include Lehmann lovegrass (*Eragrostis lehmanniana*) and Bermudagrass (*Cynodon dactylon*). Aquatic beetles have been observed.

Aquatic and Vegetation Survey Findings: This seep is located in section of unnamed tributary to Harshaw Creek with exposed bedrock. Generally, water is present in shallow pools. The site supports a number of herbaceous riparian obligate or wetland associated species including seep monkeyflower (*Mimulus guttatus*) and Mexican rush (*Juncus mexicanus*) as well as a variety of other herbaceous and shrub cover including bullgrass (*Muhlenbergia emersley*), catclaw mimosa (*Mimosa aculeaticarpa* var. *biuncifera*), sotol (*Dasylirion wheeleri*), green sprangletop (*Leptochloa dubia*), and Gentry yucca (*Yucca madrensis*). Non-native rabbitsfoot grass (*Polypogon* spp.) and invasive Lehmann lovegrass (*Eragrostis lehmanniana*) have been observed. Aquatic beetles, backswimmers, and dragonflies have been observed along this portion of the drainage. No aquatic vertebrates have been observed along this portion of the drainage.

Aquatic and Vegetation Survey Findings: A relic concrete dam that has silted in within an unnamed tributary to Harshaw Creek, downstream of Great Silver Mine supports water at the base of the dam in form of pools and flowing runs during the wet season. Algae is typically present as floating substrate. Understory vegetation is dominated by deergrass (*Muhlenbergia rigens*) and seepwillow (*Baccharis salicifolia*) with seep monkeyflower (*Mimulus guttatus*), a wetland associated plant, also present. Non-native annual rabbitsfoot grass (*Polypogon monspeliensis*) has been noted. Aquatic invertebrates that have observed include boatmen, backswimmers, dragonflies, belostomatids, and beetles. Canyon treefrog (*Hyla arenicolor*) tadpoles, toad (*Bufo* sp.) tadpoles, and black-necked gartersnakes (*Thamnophis cyrtopsis*) have been observed at this site.

Aquatic and Vegetation Survey Findings: This adit is located in a sandy, gravelly portion of an unnamed tributary to Harshaw Creek; the site was completely filled in and the area around it reclaimed in 2019. There is no remaining aquatic resource thus, no aquatic invertebrates or vertebrates are present. Upland vegetation includes mesquite (*Prosopis* sp.), oak (*Quercus* sp.), juniper (*Juniperus* sp.) and sumac (*Rhus* sp.). The reclaimed area is covered primarily by Canadian horseweed (*Conyza canadensis*) and non-native Mexican tulip poppy (*Hunnemannia fumariifolia*).

Aquatic and Vegetation Survey Findings: Water seeps from the cutout on the northwest bank. Flows atop bedrock and shallow, alluvial veneer. Vegetation is described as Madrean evergreen woodland. This site is dominated by a woody overstory of Arizona white oak (*Quercus arizonica*) and alligator juniper (*Juniperus deppeana*) and a woody understory that includes Wright's silk tassel (*Garrya wrightii*) and evergreen sumac (*Rhus virens var. choriophylla*). Ground cover is dominated by tick-trefoil (*Desmodium rosei*) and deergrass (*Muhlenbergia rigens*) with Rocky Mountain rush (*Juncus saximontanus*) and sedges (*Cyperus* sp.) present at the seep periphery. Invasive Bermudagrass (*Cynodon dactylon*) is present. Aquatic beetles and damselflies have been observed. One red-spotted toad (*Anaxyrus punctatus*) metamorph has been observed. The site and surroundings are subject to cattle grazing, and deer tracks were observed during multiple visits.

Aquatic and Vegetation Survey Findings: This site is a plastic stock drinker located in an unnamed tributary to Harshaw Creek. Algae has been observed as submerged vegetation at this site. This site does not support emergent or perimeter riparian vegetation. Understory and overstory vegetation at the site includes velvet mesquite (*Prosopis velutina*) and weakleaf bur ragweed (*Ambrosia confertiflora*). Invasive Bermudagrass (*Cynodon dactylon*) has been observed at this site. Aquatic invertebrates observed in this drinker include backswimmers, boatmen, beetles, dragonflies, and belostomatids. There have been no aquatic vertebrates observed.

Aquatic and Vegetation Survey Findings: Located in unnamed tributary to Harshaw Creek in portion with bedrock channel. Generally, water is present in shallow pools. Aquatic beetles, boatmen, belostomatids, and dragonflies have been observed. No aquatic vertebrates have been observed along drainage. Riparian overstory is limited to a few individual cottonwood (*Populus fremontii*) trees in the vicinity. Understory vegetation is dominated by seepwillow (*Baccharis salicifolia*), skunkbush sumac (*Rhus trilobata*), and deergrass (*Muhlenbergia rigens*). Riparian obligate forbs, seep monkeyflower (*Mimulus guttatus*) and annual rabbitsfoot grass (*Polypogon monspeliensis*), have been noted. Upland vegetation is characterized as oak woodlands with pointleaf manzanita (*Arctostaphylos pungens*).

Aquatic and Vegetation Survey Findings: Emergence of spring at the base of small hill flowing out from under log forming large cienega. Predominant floating and emergent vegetation include watercress (*Rorippa nasturtium-aquaticum*), chairmaker's bulrush (*Schoenoplectus americanus*), and whorled pennywort (*Hydrocotyle verticillata*). Perimeter vegetation consists of Himilayan blackberry (*Rubus discolor*), velvet ash (*Fraxinus velutina*), and Goodding's willow (*Salix gooddingii*). An adult red-spotted toad (*Anaxyrus punctatus*) has been observed.

Aquatic and Vegetation Survey Findings: This is a seep is located at exposed bedrock constriction in the upper Finley and Adams Canyon. Grasses and shrubs occur in sparse distributions, mostly dominated by little bluestem (*Schizachyrium* sp.), pinyon ricegrass (*Piptochaetium fimbriatum*), and skunkbush sumac (*Rhus trilobata*). Riparian obligate rushes (*Juncus* spp.) are also present at the site. Overstory vegetation cover is dominated by Mexican pinyon (*Pinus cembroides*) and oak (*Quercus* spp.). Invasive plants observed include Lehmann lovegrass (*Eragrostis lehmanniana*). No aquatic invertebrates or vertebrates have been observed at this site.

Dry Season Photo (5/23/2019)	Wet Season Photo (12/9/2019)
	

Note [1]=Flows too high to measure with conventional methods. Heavy rain and road drainage increased flows, turbidity and TSS

Aquatic and Vegetation Survey Findings: This seep is located in a rocky/gravelly section of Finley and Adams Canyon. Water is typically present in a small, shallow pool. Limited herbaceous cover is dominated by deergrass (*Muhlenbergia rigens*) and riparian obligate Rocky Mountain rush (*Juncus saximontanus*). Understory shrub cover is dominated by pointleaf manzanita (*Arctostaphylos pungens*), skunkbush sumac (*Rhus trilobata*), and Wright's silktassel (*Garrya wrightii*). Overstory vegetation is dominated by Arizona sycamore (*Platanus wrightii*), a preferential riparian tree species, and oak (*Quercus* spp.). Aquatic invertebrates observed along the Finley and Adams drainage include backswimmers and beetles. No aquatic vertebrates have been observed at this site.

Aquatic and Vegetation Survey Findings: Seep is located at a bedrock constriction in Finley and Adams Canyon were a plunge pool is present at the base of the bedrock. The plunge pool does not support emergent or perimeter vegetation. Within the drainage, understory vegetation is sparse, dominated by deergrass (*Muhlenbergia rigens*) and hummingbird trumpet (*Epilobium canum*). Other perennial grasses (*Poaceae* family) and riparian obligate Baltic rush (*Juncus balticus*) are present. Alligator juniper (*Juniperus deppeana*) and Mexican pinyon (*Pinus cembroides*) dominate the overstory vegetation within this section of the drainage. Invasive plant species observed include Johnson grass (*Sorghum halepense*). Aquatic invertebrates observed include backswimmers and water striders. No aquatic herpetofauna have been observed at this site. Deer tracks have been noted during some visits.

Aquatic and Vegetation Survey Findings: Hillslope spring emergence is captured in the springbox and plumbed to the downstream concrete drinker. The ground is saturated downstream of the spring box in the wash for a slight reach. Concrete, rectangular stock drinker (approx. 4m x 2m) is fed from a pipe sunk into the adjacent hillside. The line may collect water from a subsurface source or the adjacent concrete stock drinker. Upland vegetation is Madrean evergreen woodland. Aquatic beetles, backswimmers, and boatmen have been observed. An elegant trogon (*Trogon elegans*) and grey fox (*Urocyon cinereoargenteus*) have been observed at the site.
