1. INTRODUCTION

1.1 Facility Details

The facility details, as defined in Environment Protection Licence (EPL) 2504, are summarised in Table 1.

Table 1: Facility Details

Company:	Endeavour Coal Pty Ltd	
EPL Number:	2504	
Postal Address:	PO Box 514 Unanderra NSW 2526	
Scheduled Activities:		
Facility Name and Address:	Appin Colliery - West Douglas Park Drive Douglas Park NSW 2569 Appin Colliery - East Off Appin Road Appin NSW 2560 Appin Colliery - North, West Cliff Coal Preparation Plant and North Cliff Wedderburn Road Appin NSW 2560	

1.2 Overview of Operations

The premises and facilities associated with EPL 2504 are wholly owned and operated by Endeavour Coal Pty Ltd, a subsidiary company of Illawarra Coal Holdings Pty Ltd (ICHPL) and South32 Limited.

The premises and facilities covered by EPL 2504 are for Appin Mine, which is comprised of Appin Colliery – West (Appin West), Appin Colliery - East (Appin East), Appin Colliery – North (Appin North), West Cliff Coal Preparation Plant (WCCPP) and North Cliff.

Underground mining activities have been carried out at Appin North (formerly West Cliff Mine) since 1976. Underground mining activities within the Appin Holdings commenced at Appin East in 1962 and at Appin West (formerly Tower Colliery) in 1978.

Run-of-Mine (RoM) coal from the Appin underground mining operations is transported from the Appin East Pit Top via truck, along Appin Road and Wedderburn Road to the WCCPP. Processed coal (clean coal product) from the WCCPP is transported by road to the Port Kembla Coal Terminal for shipping to domestic and international customers, or to BlueScope Steel or other local customers.

This document UNCONTROLLED once printed				
Document ID	Document IDAPNMP0124Version2.1			
Last Date Updated	23/11/2023	Next Review Date	6/03/2026	

The coal wash generated as part of the washing process is emplaced at the purpose-built emplacement area located at Appin North.

No mining activities are undertaken at the North Cliff site. This site is located in the Dharawal National Park. Rehabilitation of this site is planned.

1.3 Plan Objectives

This Pollution Incident Response Management Plan (PIRMP) has been prepared in accordance with Part 5.7A Section 153A of the *Protection of the Environment Operations Act 1999 (POEO Act)* and Section 72 of the *Protection of the Environment Operations (General) Regulation 2022 (POEO Regulation)*.

The objectives of the PIRMP (as per the EPA's Guideline: Pollution Incident Response Management Plans dated September 2022) are to:

- minimise the risk of a pollution incident occurring as a result of licensed activities, by identifying risks and the actions proposed to minimise and manage those risks;
- have established clear and effective notification, action and communication procedures to ensure the right people are notified, warned and quickly provided with updates and information they may need to act appropriately, including people who may need to be involved in incident responses – including staff at the premises; the Environment Protection Authority (EPA); and other relevant authorities (such as Fire and Rescue NSW, NSW Health and local councils) and industrial, commercial and residential neighbours and other members of the community; and
- have properly trained staff and up-to-date incident management information available to ensure the potential impact of a pollution incident is minimised.

2. **DEFINITIONS**

Term	Definition
ANCOLD	Australian National Committee on Large Dams
BCD	Brennans Creek Dam
EPA	Environment Protection Authority
EPL	Environment Protection Licence
ICHPL	Illawarra Coal Holdings Pty Ltd
IMC	Illawarra Metallurgical Coal
LDP	Licence Discharge Point
РСВ	Polychlorinated biphenyl
PIRMP	Pollution Incident Response Management Plan
POEO Act/Regulation	Pollution of the Environment Operations Act/Regulation

PPE	Personal Protective Equipment
RoM	Run of Mine
SDS	Safety Data Sheet
WCCPP	West Cliff Coal Preparation Plant

3. STATUTORY REQUIREMENTS

Table 2 identifies the relevant statutory requirements as detailed in the *POEO Act* and *POEO Regulation* for inclusion in the PIRMP and where each requirement is described in the plan.

Table 2: Statutory Requirements

Requirements	PIRMP Section
Notification Procedures – POEO Act Section 148, 149	Section 4
Action to be taken following a pollution incident - <i>POEO Act</i> Section 153C(b) and 153F	Section 4 and Section 7
Procedures for coordinating with the EPA, Local Council, Ministry of Health, SafeWork NSW and Fire and Rescue NSW – <i>POEO Act</i> 153C(c)	Section 4 and Section 7
Description of hazards to human health or environment associated with the relevant activity – <i>POEO Act</i> Section 153C(d) and <i>POEO Regulation</i> 72(a)	Appendix 2
Likelihood of hazards occurring – <i>POEO Act</i> Section 153C(d) and POEO Regulation 72(b)	Appendix 2
Pre-emptive actions to minimise or prevent risk of harm to human health or environment – <i>POEO Act</i> Section 153C(d) and <i>POEO Regulation</i> 72(c)	Section 8
Inventory of potential pollutants – <i>POEO Act</i> Section 153C(d) and <i>POEO Regulation</i> 72(d)	Section 5, Appendix 1
Maximum quantity of pollutant to which the licence relates – <i>POEO Act</i> Section 153C(d) and <i>POEO Regulation</i> 72(e)	Appendix 1
Safety equipment to minimise the risks to human health or environment – POEO Act Section 153C(d) and POEO Regulation 72(f)	Section 10
Names, positions and contact details – <i>POEO Act</i> Section 153C(d) and <i>POEO Regulation</i> 72(g)	Section 4.5.2 – Table 4
Contact details of each relevant authority- <i>POEO Act</i> Section 148 and <i>POEO Regulation</i> 72(h)	Section 4.5.2 – Table 5
Early warning mechanism for people off site – <i>POEO Act</i> Section 153C(a), (d) and <i>POEO Regulation</i> 72(i)	Section 4.5.3
Arrangements for minimising risk of harm to persons on the premises – POEO Act Section 153C(d) and POEO Regulation 72(j)	Section 9
Detailed maps – POEO Regulation 72(k)	Appendix 3
Description of how any identified risk of harm to human health will be reduced, including early warnings, updates and action to be taken - <i>POEO Regulation</i> 72(I)	Section 7, Section 8, Section 9

This document UNCONTROLLED once printed

Training - POEO Act Section 153C(d) and POEO Regulation 72(m)	Section 11
Testing of plan – <i>POEO Act</i> Section 153C(d) and Section 153E and <i>POEO Regulation</i> 72(n) and 75	Section 12.2
Updating of plan - POEO Act Section 153F and POEO Regulation 72(o)	Section 12.3
Manner in which plan is tested and maintained – <i>POEO Act</i> Section 153C(d) and <i>POEO Regulation</i> 72(p)	Section 12.2
Availability of plan – POEO Act Section 153D and POEO Regulation 74	Section 12.1

4. NOTIFICATION OF A POLLUTION INCIDENT

4.1 Roles and Responsibilities – Incident Response Process

As a minimum, all employees are required to report all hazards, accidents and incidents which occur in the workplace that either have the potential to cause or have caused harm to personnel, property or the environment.

Key responsibilities associated with the incident response process flow chart are summarised in Table 3.

Table 3: Roles and Responsibilities – Incident Response Process

Role	Responsibility
Approvals Manager	Undertake or delegate Superintendent Environment responsibilities in their absence.
Superintendent Environment	 Assess materiality of incident and activate relevant response system.
	 Assess potential for off-site impacts and notify External Affairs team if required.
	Notify internal stakeholders as appropriate.
	 Notify relevant agencies (written and verbal notifications as required).
Site Personnel	Report actual or potential incidents and hazards
(including Specialist	immediately.
Environment)	Assist in site response and clean-up activities.
IMC Incident Controller	Coordinate incident response activities.
	Communicate with emergency services personnel to identify actions to be taken as appropriate.
Site based Incident Management Teams	Coordinate incident response activities (as appropriate).

This document UNCONTROLLED once printed				
Document ID	APNMP0124	Version	2.1	Page 7 of 60
Last Date Updated	23/11/2023	Next Review Date	6/03/2026	

Manager External Affairs (or representatives)	Coordinate media response/s and community notifications (Note: Only the Vice President Operations or nominated delegate is authorised to speak to the media).
Principal Community	Coordinate communication with impacted community members.
Control Room Officer	Coordination of initial emergency response and internal notifications.

4.2 Timeframes for reporting

If a pollution incident occurs in the course of an activity at the premises that causes, or threatens to cause, material harm to the environment, this PIRMP must immediately be implemented. All pollution incidents causing or threatening material harm to the environment are to be immediately notified in accordance with Section 4.5.

4.3 Definition of a Pollution Incident and Material Harm

The POEO Act defines a 'pollution incident' as being:

'Pollution incident means an incident or set of circumstances during or as a consequence of which there is or is likely to be a leak, spill or other escape or deposit of a substance, as a result of which pollution has occurred, is occurring or is likely to occur. It includes an incident or set of circumstances in which a substance has been placed or disposed of on premises, but it does not include an incident or set of circumstances involving only the emission of any noise'.

Notifications of a pollution incident are required if there is a risk of 'material harm to the environment', which is defined in Section 147 of the *POEO Act* as:

- (a) harm to the environment is material if:
 - (i) it involves actual or potential harm to the health or safety of human beings or to ecosystems that is not trivial, or
 - (ii) it results in actual or potential loss or property damage of an amount, or amounts in aggregate, exceeding \$10,000 (or such other amount as is prescribed by the regulations), and
- (b) loss includes the reasonable costs and expenses that would be incurred in taking all reasonable and practicable measures to prevent, mitigate or make good harm to the environment.

The *POEO Act* defines 'pollution' in the following terms:

'pollution' means

- (a) water pollution; or
- (b) air pollution, or
- (c) noise pollution; or
- (d) land pollution.

This document UNCONTROLLED once printed				
Document ID	APNMP0124	Version	2.1	Page 8 of 60
Last Date Updated	23/11/2023	Next Review Date	6/03/2026	

Material harm can occur both on land located within the EPL boundary, along with land located outside the EPL boundary. A determination of a material harm incident will be made by the Superintendent Environment. If the Superintendent Environment is not available immediately, then determination can be made by Approvals Manager or site General Manager in consultation with the site Specialist Environment.

If the Control Room Officer cannot contact the Superintendent Environment, Approvals Manager, site General Manager or Environment Specialist, then the Control Room Officer must treat the incident as a material harm incident and initiate reporting to relevant agencies as listed in Section 4.5.2.

4.4 Incident Response Process

The incident response protocols, including the communication protocol and on-site emergency response actions for responding to an incident that has resulted in a material impact to human health or the environment (as per the definition provided in Section 4.3 of this plan), are shown in Figure 1.

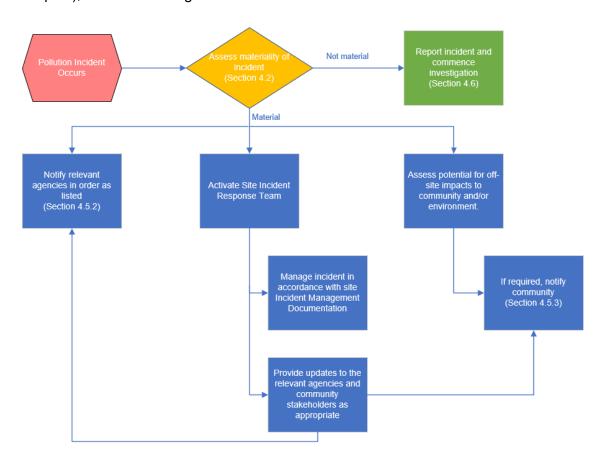

Figure 1: Incident Response Process Flow

4.5 Communication Protocol

4.5.1 Internal Stakeholders (i.e. employees/contractors)

Internal communications will be undertaken as per the site Emergency Response Control Plan (refer to reference list in Section 14).

This document UNCONTROLLED once printed				
Document ID	APNMP0124	Version	2.1	Page 9 of 60
Last Date Updated	23/11/2023	Next Review Date	6/03/2026	

4.5.2 Government Agencies

The key contacts associated with the implementation/activation of this plan are provided in Table 4.

Table 4: Key Contacts Table

IMC	
Superintendent Environment – Chris Schultz	
Specialist Environment (Appin North) – Polly Barlow	_
Specialist Environment (Appin East & West) – Hubert Mhangami	1800 102 210
Manager External Affairs – Antony Leone/Amanda Silarski	 (via IMC Community Call Line)
Specialist Community – Sandra Moreno	_
General Manager – Andy Hyslop	_

The relevant government agencies (Table 5) will be notified of a pollution incident that has caused or has the potential to cause material harm immediately (i.e. promptly and without delay). The agencies are to be notified as listed (i.e. starting from the top).

Table 5: External Agencies to be Notified

External Agencies			
Environment Protection Authority	131 555 ¹		
Department of Planning and Environment - Compliance Wollongong Office: (Email:	(02) 4247 1852		
compliance@planning.nsw.gov.au) ²			
NSW Resources Regulator (Email: nswresourcesregulator@service-now.com)	1300 814 609³		
Public Health (Local Health District South Western Sydney) (Email: swslhd-esu@health.nsw.gov.au)	(02) 9794 0855 ⁴		
SafeWork NSW ⁵	13 10 50 ⁶		
Wollondilly Shire Council	(02) 4677 1100 ⁷		
Fire and Rescue NSW	000 (if emergency) 1300 729 579 (pollution notification)		
NSW State Emergency Service	132 500		

⁷ Ask for Environmental Health Officer.

¹ Select Option 1.

² Also report via the Major Projects Portal: https://www.planningportal.nsw.gov.au/major-projects.

³ Office open between 8.30 am and 4.30 pm. Will be directed to on call person after hours. Select Option 1.

⁴ Ask for Environmental Health Officer on call.

⁵ SafeWork NSW do not regulate mines and therefore they should only be contacted where the incident has not occurred on the mine site.

⁶ Select 2 and then Select 2.

WaterNSW (Email: customer.helpdesk@waternsw.com.au)	1300 662 077 ⁸
Dams Safety NSW (Brennans Creek Dam (BCD) Incident Only)	0403 681 645

Relevant information that is required to be given is:

- time, date, nature, duration and location of the incident;
- location of the place where pollution is occurring or is likely to occur;
- nature, estimated quantity or volume and concentration of any pollutants involved (if known);
- circumstances in which the incident occurred (including the cause of the incident, if known); and
- action taken or proposed to be taken to deal with the incident and any resulting pollution or threatened pollution, if known.

IMC will, through the IMC Incident Controller, coordinate response activities with the relevant agencies as required.

4.5.3 Local Community

Community stakeholders that are potentially affected by a pollution incident causing or having the potential to cause material harm will be notified immediately (i.e. without delay) by one (or more) of the following methods:

- door knocking by company representatives or emergency services personnel (dependent on nature of event);
- phone call by company representative;
- email from a company representative;
- letterbox drops;
- BCD Emergency Notification Alert System (for residents potentially impacted by dam failure); or
- other method as determined by the Manager External Affairs.

The appropriate method for communication will be determined by the Manager External Affairs or as directed by the relevant agency and will be tailored to the nature of the incident, phase of response, and types of neighbours who are required to receive information.

If required (dependent on the nature of the incident) the communication should outline practical steps that community members can take to reduce the risk of harm to their health or property, both during and after the incident. This may include instructions to close windows and doors and remain inside, avoiding accessing water in creeks and rivers, or avoiding use of groundwater.

8	Select	6.	then	select	2.
---	--------	----	------	--------	----

This document UNCONTROLLED once printed				
Document ID	Page 11 of 60			
Last Date Updated	23/11/2023	Next Review Date	6/03/2026	

Regular updates will be provided to the affected community stakeholders throughout the course of the event.

Signage will be employed, as appropriate and necessary, to inform the community in cases of incidents occurring on a property outside the premises where community members might be at risk of injury or illness.

4.6 Event Reporting and Investigation

Environmental events are to be reported in Global 360 (G360). Reporting is to be undertaken in accordance with the Reporting and Investigation Standard (IMCSTD0069), Event Report and Basic Investigation Procedure (IMCP0098) and Environmental Compliance/Conformance Assessment and Reporting Procedure (IMCP0186).

5. INVENTORY OF POLLUTANTS

Site inspections are periodically conducted to review the inventory of storage facilities at Appin Mine. The inventories include details of potential pollutants at the storages, the maximum quantity that is likely to be stored or held at the facilities, and whether the storages have the potential to be associated with a material pollution incident.

The pollutant inventories for the facilities are provided as Appendix 1.

The storage facilities are assigned a specific identification number with the location of the storage facility reflected in the site maps (refer to Appendix 3).

A register of hazardous substances and dangerous goods is maintained. The information requirements for the hazardous materials register are detailed in the Substance Management Procedure (IMCP0054). A copy of the National Code of Practice Compliant Safety Data Sheets (SDS) for each hazardous material is maintained within the register.

6. DESCRIPTION AND LIKELIHOOD OF HAZARDS

An Aspects and Impacts Register has been developed and is maintained to identify the main hazards to human health or the environment associated with a pollution or other incident at the site.

The listing and assessment of pollution and other incidents with potentially material consequences are provided in the 'Hazard Assessment Summary Tables' in Appendix 2. The hazard assessments provide a description of the event, likely causes, consequences, responses and controls and ranking for materiality of the consequences.

<u>Note</u>: Regardless of whether a particular incident is captured within the hazard assessment tables, any pollution incident with the potential for material consequences will be addressed as per the 'incident response protocols' of this plan.

7. EMERGENCY RESPONSE

Emergency Response Control Plans (APNMP0005 and WCPMP0009) are in place which describe the on-site actions to be taken in response to an incident that has resulted (or has

This document UNCONTROLLED once printed				
Document ID	Page 12 of 60			
Last Date Updated	Last Date Updated 23/11/2023 Next Review Date 6/03/2026			

the potential to result) in a material impact to human health and/or the environment. This plan will be activated in parallel with the PIRMP as required to minimise the impacts of the pollution incident as much as practically possible through early response/management. The Emergency Response Control Plans define the roles and responsibilities of key site personnel and provide information on evacuation protocols and muster points.

If there is an emergency on site, the person who received the initial notification must initiate the emergency response by notifying the Control Room Operator at Appin Mine, either by telephone, radio or other means.

Surface personnel will assemble at the appropriate muster point and will await instructions from the person assuming the Incident Controller responsibilities. If evacuation is not required personnel will remain on site and await instructions from the person assuming the Incident Controller responsibilities and assist in the management and containment of the emergency.

The IMC Incident Controller will communicate with emergency services personnel to identify actions to be taken as appropriate.

The BCD Safety Emergency Plan (WCPMP0004) is in place. The BCD Safety Emergency Plan has been developed in accordance with *Dams Safety Act* requirements and provides details of the emergency response procedures (including internal and external communication protocols) that are to be used in the event of a dam failure. The BCD Safety Emergency Plan has been prepared through consultation with the NSW State Emergency Service.

8. PRE-EMPTIVE ACTIONS TO REDUCE THE RISK OF HARM TO HUMAN HEALTH OR THE ENVIRONMENT

Appendix 2 describes specific pre-emptive actions that are in place to reduce the risk of harm to human health or the environment where a specific incident may occur. In addition, the following proactive actions are implemented (as relevant) to reduce the risk of harm occurring as a result of a pollution incident:

- a) an ISO 14001 certified Environmental Management System is in place;
- b) site personnel receive regular training as outlined in Section 11;
- c) relevant personnel are trained in the appropriate use of safety equipment and general use of pollution control equipment;
- d) risk assessments are undertaken for tasks and activities to identify health, safety and environmental risks (including Take 2s, Task Analyses, Qualitative Risk Assessments);
- e) regular monitoring of noise, dust and water impacts is undertaken in accordance with the management plans required under the Project Approval and the EPL;
- f) regular site inspections are undertaken by the Specialist Environment and other site personnel;
- g) maintenance regimes and checks are in place for site equipment and storage facilities;

This document UNCONTROLLED once printed					
Document ID	Document ID APNMP0124 Version 2.1				
Last Date Updated	Last Date Updated 23/11/2023 Next Review Date 6/03/2026				

- h) site equipment is checked prior to its use on site to verify it meets safety and environmental standards;
- i) pre-shift communications and toolbox talks are provided to site personnel at start of shift to communicate incidents, hazards and corrective actions;
- j) incidents are investigated, and corrective actions are developed and implemented to prevent a reoccurrence;
- k) governance reviews are undertaken internally to verify compliance with site management plans;
- I) bunds are in place for the storage of hazardous materials;
- m) substance approval processes are in place for the introduction of new chemicals to site; and
- n) Independent Environmental Audits are undertaken on a triennial basis to assess compliance against the conditions in the EPL and Project Approval.

9. MINIMISATION OF HARM TO PERSONS ON THE PREMISES

Actions and arrangements are in place to minimise the risk of harm to any persons who will be on the premises, or who are likely to be on the premises, should an incident occur. These actions and arrangements include:

- a) site personnel are informed, trained, and competent, relating to their responsibility and required actions during an emergency;
- b) emergency response teams have been established that undertake regular training;
- training in emergency response for site personnel includes evacuation points and procedures;
- d) evacuation points are clearly recognised on site by appropriate signage;
- e) all visitors are familiarised with the site and are made aware of the evacuation procedure;
- f) fire alarms are in place;
- g) access to site is restricted to inducted (or otherwise approved) personnel;
- h) access to high risk areas is restricted to appropriately qualified personnel;
- i) minimum personal protective equipment (PPE) requirements are in place; and
- i) signage is in place where hazardous materials are stored.

10. EQUIPMENT AVAILABLE TO CONTROL OR CONTAIN A POLLUTION INCIDENT

The Spill Management Procedure (IMCP0183) outlines the process to be followed in the event of a spill. Spill kit type and locations are identified in the procedure.

This document UNCONTROLLED once printed					
Document ID	Document ID APNMP0124 Version 2.1				
Last Date Updated	Last Date Updated 23/11/2023 Next Review Date 6/03/2026				

In addition, the Spill Trigger Action Response Plan (TARP) (IMCTARP0006) is made available in the Control Room for use in the event of a spill to determine the action that needs to be taken.

Other safety equipment and information available includes:

- a) a selection of PPE (hard hats, gloves, glasses, masks, goggles) (available from spill kits, PPE dispensers and the warehouse);
- b) fire extinguishers and hydrants;
- c) gas monitors (available from the lamp rooms at each pit top);
- d) SDSs (available electronically through Chemalert); and
- e) eye wash stations and safety showers.

11. STAFF TRAINING

Environmental personnel responsible for the initiation of the PIRMP are familiarised with the PIRMP on commencement in the role and are involved in the regular review and testing of the PIRMP.

Site personnel are made aware of the PIRMP during the IMC site induction process. Completion of this induction package is a pre-requisite for working on any IMC controlled operation. Personnel are required to complete refresher training on an annual basis for underground workers and two-yearly basis for surface personnel.

In addition to the above induction, spill response and chemical handling aspects will also be provided to key personnel on site (i.e. personnel that can influence the environmental performance of the operation) as part of an Environmental eLearning Training Package. This training package was developed with input from the Environment Team and is administered by the Training Team.

Training records are managed through the Learning Management System.

Additional information will be provided to site personnel through pre-shift communications, toolbox talks and environmental awareness sessions as required.

12. PLAN ADMINISTRATION

12.1 Availability of Plans

In accordance with Section 153D of the *POEO Act* and Section 74 of the *POEO Regulation*, the plan will be made available to all site personnel via the site document control system.

In addition, the plan framework, protocols and processes (public version) will be made available to the public via the following methods:

- uploading a public version of the plan to the IMC website (link); and
- providing copies of the public version of the plan, without charge, to any person who requests a copy.

This document UNCONTROLLED once printed					
Document ID	Document ID APNMP0124 Version 2.1				
Last Date Updated	Last Date Updated 23/11/2023 Next Review Date 6/03/2026				

12.2 PIRMP Testing

This plan will be tested at least once every 12 months in accordance with Part 5.7A Section 153E of the *POEO Act* and Section 75 of the *POEO Regulation* to check that the information contained within the plan is accurate and up to date, and that the plan is capable of being implemented in a workable and effective manner.

A record of tests is provided in Table 6.

The primary method for testing the plan will be via desktop simulations which will be supplemented by periodic practical exercises or drills, however, should an event occur, this may also be considered as a test.

The PIRMP will also be tested within one month of any pollution incident occurring that caused or threatened material harm to the environment.

Table 6: Record of PIRMP tests

Date of testing of plan	Person testing plan	Persons involved in the testing of the plan

12.3 PIRMP Review

The PIRMP will be nominally reviewed on a three-yearly basis. Updates may occur following PIRMP tests where any improvements are identified, where personnel or contact details for regulatory agencies have changed or there is an update to site procedures.

The PIRMP is a controlled document in the document management system. The document control process will be followed for updating the PIRMP.

13. PENALTIES FOR NON-COMPLIANCE

There are offences set out in the *POEO Act* in relation to PIRMP requirements. These relate to the failure to:

- prepare a PIRMP that complies with Part 5.7A of the POEO Act;
- ensure the PIRMP is kept at the premises the EPL relates to, and make parts of it available to the public; and
- test the PIRMP in accordance with the POEO Regulations

The maximum penalties for the above offences are:

- for corporations \$1,000,000, and for continuing offences, a further penalty of \$120,000 per day the offence continues; and
- for individuals \$250,000, and for continuing offences, a further penalty of \$60,000 per day the offence continues.

It is also an offence if a person carrying out an activity does not implement the relevant PIRMP if a pollution incident occurs in the course of an activity, so material harm to the environment is caused or threatened.

The maximum penalties for this offence are:

- for corporations \$2,000,000, and for continuing offences, a further penalty of \$240,000 per day the offence continues; and
- for individuals \$500,000, and for continuing offences, a further penalty of \$120,000 per day the offence continues.

Appendix 2: Hazard Assessment Summary Tables

Appin Mine (General)

Facility	Appin Mine		
Storage ID	N/A		
Hazard	Bushfire		
Cause	 Drought conditions High fuel load in surrounding bushland Arson Lightning strike Train exhaust¹⁰ 		
Impact	 Damage to site storages and potential release of contents causing land and/or water pollution Potential for explosion (dependent on storages impacted) Potential for coal stockpile fire resulting in the release of air pollutants including fine particulates, heavy metals and various oxides. 		
Likelihood	Low	Materiality	High
Controls (includes pre- emptive actions and safety devices)	 Maintenance of asset protection zones as required Hazard reduction activities are undertaken as required Involvement with Bushfire Management Committees (Wollongong and Wollondilly) Maintain relationship with Rural Fire Service IMC Emergency Response Team in place Preparing for and Responding to a Bush Fire Procedure (APNP0044) in place Water sources available for fire fighting Bushfire Management Plan (APNMP0108) in place 		
Actions to be taken (if incident were to occur)	Instigate Incident M Actions to be taken site infrastructure.		m ent on the impact of bushfire on

¹⁰ Cause of grass fire in vicinity of AMVA Project site in November 2023.

Document ID	ICHMP0229	Version	5.1	Page 26 of 60
Last Date Updated	15/02/2021	Next Review Date	15/02/2023	

Facility	Appin Mine		
Storage ID	N/A		
Hazard	Flooding		
Cause	- Intense rainfall ever	nts	
Impact	 Overflow of site storages and potential release of contents causing land and/or water pollution Inability to safely access site Slope instability Scour erosion and sediment movement Damage to site infrastructure 		
Likelihood	Low	Materiality	High
Controls (includes pre- emptive actions and safety devices)	- Keep bunds empty and take appropriate measures where practical to prevent them being filled with stormwater IMC Emergency Response Team in place - Weather forecasts - Underground water storages - Maintain sediment ponds clear of build-up - Continually treat and remove stormwater from retention basins according to licence conditions to maintain capacity - Actively reuse treated stormwater from retention basins on site as required - Keep chemicals stored above areas that are prone to inundation - Secure all loose items to prevent them coming into contact with floodwater		
Actions to be taken (if incident were to occur)	Instigate Incident M Actions to be taken site infrastructure.		ent on the impact of flooding on
