

Bulli Seam Operations Annual Compliance Report – August 2021 (EPBC 2010/5350)

Date of submission: 10 August 2021

South32 Website Upload Date: 10 August 2021

Abbreviations:

DOtEE – Federal Department of the Environment and Energy (now DAWE)

DAWE – Department of Agriculture, Water and the Environment (formerly DOtEE)

OEH – NSW Office of Environment and Heritage (now Biodiversity and Conservation Science Directorate)

CCL – Consolidated Coal Lease

EPBC – Environment Protection and Biodiversity Conservation

IMC – Illawarra Metallurgical Coal

In accordance with condition 14 of the EPBC Approval (2010/5350), within three months of every 12 month anniversary of the commencement of the action, the person taking the action must publish a report on their website addressing compliance with each of the conditions of this approval, including implementation of any management plans as specified in the conditions. Documentary evidence providing proof of the date of publication and non-compliance with any of the conditions of this approval must be provided to the department at the same time as the compliance report is published.

Condition	Condition Summary	Status	Compliant 2021
1	<u>Persoonia Hirsuta (Hairy Geebung)</u> Approval holder must legally secure the approved offset area for conservation for the duration of the EPBC approval.	Proposed offset area submitted to DOtEE in the <i>Persoonia hirsuta</i> Offset Management Plan. Application submitted on 26 Nov 2013 to amend CCL724 via a s238 Condition under the Mining Act 1992 to legally secure a <i>Persoonia hirsuta</i> Offset Area at Appin North (formerly West Cliff Mine) as required by the Bulli Seam Operations EPBC Approval (2010/5350). The Minister for Resources and Energy amended CCL 724 on 23 March 2014.	Yes

Condition	Condition Summary	Status	Compliant 2021
2	<p><u>Persoonia Hirsuta</u></p> <p>Develop a management plan for the <i>Persoonia hirsuta</i> offset area.</p> <p>Annual monitoring requirements and provide results of the monitoring to the Dept within a timeframe.</p> <p>No clearing of Stage 4 emplacement area permitted until the Offset MP has been approved by the Minister.</p>	<p><i>Persoonia hirsuta</i> Offset Management Plan was submitted to DOtEE prior to 31 December 2012 and approved on 22 November 2013 (ref 2013/10882). The latest revision (version 8) was approved April 2019. Plan is available on South32 website using this link: Persoonia hirsuta Offset Management Plan.</p> <p><i>Persoonia hirsuta</i> Condition Reports were submitted as required in 2013, 2014, 2015 (submitted late), 2016, 2017, 2018, 2019 and 2020.</p> <p>Clearing for Stage 4 coal-wash emplacement has not yet been undertaken.</p>	Yes
3	<p><u>Persoonia Hirsuta</u></p> <p>Engage a suitably qualified expert to undertake targeted research to inform conservation activities. Make research publicly available.</p>	<p>IMC received an extension to the deadline for finalising and reporting the research to 30 June 2021. The research report was submitted to DAWE on 29 June 2021. The research report is available on the South32 website using this link: Persoonia hirsuta Research Report.</p> <p>The research strategy is included within the approved Offset MP (see link above).</p>	Yes
4	<p><u>Shale/Sandstone Transition Forest</u></p> <p>Implement the approved SSTF Offset MP.</p> <p>Legally secure the offset for long term conservation.</p>	<p>In 2012, IMC provided an offset management plan as well as ecological survey information to comply with these conditions. The plan was approved by DOtEE in June 2013. In 2014, IMC requested an extension to the deadline to have the offset secured in perpetuity. DOtEE granted an additional 18 months, making the deadline March 2016.</p> <p>In October 2015, IMC made an application to (then) NSW Office of Environment & Heritage (OEH) to have the SSTF offset secured via a BioBanking Agreement</p>	Yes

Condition	Condition Summary	Status	Compliant 2021
		<p>under Part 7A Division 2 of the <i>Threatened Species Conservation Act 1995</i>. The BioBanking Agreement was finalised and executed on 1 February 2017.</p>	
5	<p><u>Shale/Sandstone Transition Forest</u> Provide a management plan for shale/sandstone transition forest.</p>	<p>Management plan submitted and approved on 7 June 2013. The revised Plan was updated and approved on 2 September 2014.</p> <p>The Management Plan was updated in 2018 and re-submitted to the DOtEE to reflect the new offset mechanism (BioBanking). Condition 5A was added to the EPBC approval in May 2018:</p> <div data-bbox="983 588 1637 842" style="border: 1px solid black; padding: 5px;"> <p style="text-align: center; margin: 0;">Conditions attached to the approval</p> <p>5A If the Shale Sandstone Transition Forest is legally secured as a registered NSW BioBanking site, the management plan developed under the NSW BioBanking Agreement for that site is an Offset Management Plan for the purposes of Condition 4. The annual reporting required under that scheme may be provided to the department in place of the reports containing monitoring results required at Condition 5c, on the proviso that all measures specified in Condition 5 are covered.</p> </div> <p>The 2017/18, 2018/19 and 2019/20 SSTF monitoring was conducted under the requirements of the Biobanking Agreement.</p> <p>The 2020 annual report was also completed in accordance with the BioBanking Agreement and will be provided to DAWE in August 2021.</p> <p>In the Independent Environmental Audit (Dec 2019) that was conducted for the Bulli Seam Operations (BSO) under Condition 9 of Schedule 6 of the BSO Project Approval and Condition 18 of EPBC Approval 2010/5350, an administrative non-compliance was noted, and a recommendation was made as follows:</p>	Yes

Condition	Condition Summary	Status	Compliant 2021
		<p><i>It is recommended that confirmation be sought from the Department that the required timing for submission of the monitoring report in Condition 5c be changed to that required under the Biobanking Scheme.</i></p> <p>South32 received the below response from DAWE in July 2020:</p> <div data-bbox="981 427 1451 965" style="border: 1px solid black; padding: 5px;"> <p>From: Peter Blackwell <Peter.Blackwell@awe.gov.au> Sent: Friday, 10 July 2020 2:34 PM To: Schultz, Chris <Chris.Schultz1@south32.net> Cc: Vaughn Cox <Vaughn.Cox@awe.gov.au> Subject: RE: Submission date for Biobanking Report - Shale/Sandstone Transition Forest Offset [SEC=OFFICIAL]</p> <p>Hi Chris</p> <p>I confirm that, consistent with the intent of condition 5A, added to the conditions attached to the approval on 4 May 2018, if the SSTF is legally secured as a registered NSW BioBanking site, the annual reporting required under NSW BioBanking for that site may be provided to the Department in place of the reports containing monitoring results required at condition 5c, and thus such reports should be provided to the Department in accordance with the timing required under NSW BioBanking for that site.</p> <p>Cheers</p> <p>Peter Blackwell Post Approvals Section Assessments (WA, SA, NT), Post Approvals and Policy Branch Environment Approvals Division</p> <p>Department of Agriculture, Water and the Environment awe.gov.au T: 03 6208 2927 E: peter.blackwell@awe.gov.au</p> </div> <p>In June 2021, the wording in Condition 5 of the approval was amended to remove ambiguity.</p>	
6	<p><u>Coal Wash Emplacement Staging and Rehabilitation Plan</u></p> <p>Develop a Coal Wash Emplacement Staging and Rehabilitation Plan for stage 4 coal wash emplacement area.</p> <p>Submission of rehabilitation monitoring results.</p>	<p>The Coal Wash Emplacement Area Management Plan (available on the South32 website using this link) incorporates the requirements of both the EPBC Act approval and NSW EP&A Act. The latest version of the Plan was approved by DAWE on 28 January 2021.</p> <p>Results of the monitoring are provided in the Annual Review which is published on the South32 website. The 2020 report was submitted on time by email on 21 July 2021 and will be included in the FY21 Annual Review.</p>	Yes

Condition	Condition Summary	Status	Compliant 2021
7	<p><u>Southern Brown Bandicoot and Broad Headed Snake Management Plan or Plans</u></p> <p>Develop a Southern Brown Bandicoot and Broad Headed Snake conservation management plan or plans.</p>	<p>Draft Plans completed and submitted to DOfEE on 15 May 2013.</p> <p>Plans were revised following comments from DOfEE and OEH. Final Plans re-submitted to DOfEE and OEH on 29 April 2014. Plans approved on 28 May 2014.</p> <p>The Plans were revised and combined in 2020 in APNMP0111. The plan was approved by DAWE on 28 January 2021. The current Plan is available on the South32 website at Broad-headed Snake and Southern Brown Bandicoot Management Plan.</p>	Yes
8	<p><u>Surface and Ground Water Quality Monitoring and Adaptive Management Plan</u></p> <p>Develop a Surface and Ground Water Quality Monitoring and Adaptive Management Plan for species listed in the EPBC Act.</p>	<p>Original Plan submitted on the 30 September 2012 to DOfEE. Plan was approved on 3 July 2014.</p> <p>The Plan was revised in 2020 and approved by DAWE on 28 January 2021. The current plan is available on the South32 website at: Adaptive Management Plan for Water Sensitive EPBC Species.</p>	Yes
9	<p><u>Mine Closure Environmental Management Plan</u></p> <p>Develop a mine closure plan 3 years prior to closure for EPBC Act listed species.</p>	Plan not yet submitted. To be submitted in the mine closure plan.	N/A
10	<p><u>Mine Closure Environmental Management Plan</u></p> <p>Management for EPBC listed bats through the decommissioning of mining equipment.</p>	Plan not yet submitted. To be submitted in the mine closure plan.	N/A
11	<p><u>Shapefiles</u></p> <p>Provide offset area shapefiles to the DOfEE.</p>	Shapefiles provided on 26 November 2013.	Yes

Condition	Condition Summary	Status	Compliant 2021
12	<u>Notification of Actual Date of Commencement</u> Notification date of commencement to be supplied to DSEWPaC.	Letter sent to DOtEE (previously DSEWPaC) on 31 May 2012.	Yes
13	<u>Publication Requirements</u> Publish all management plans, reports, strategies or agreements with the Department	Undertaken as required. See South32 website: https://www.south32.net/our-business/australia/illawarra-metallurgical-coal/documents .	Yes
14	<u>Compliance Report</u> Publish a report on website addressing compliance with each of the conditions of this approval.	This compliance report meets this condition. The 2013, 2014, 2015, 2016, 2017, 2018, 2019 and 2020 reports were submitted and are available on the South32 website.	Yes
15	<u>Accurate Records Must be Maintained</u> Maintain accurate records substantiating all activities associated with or relevant to the conditions of approval.	Documents are maintained in the IMC controlled document system.	Yes
16 (16A, 16B, 16C, 16D, 16E)	<u>Minister's Approval of the Modification to a Management Plan, Report, Strategy or Agreement</u> Apply to the minister for approval to modify management plans, reports, strategies or agreements.	The following management plans were submitted in FY21: <ul style="list-style-type: none"> - Broad-headed Snake and Southern Brown Bandicoot Management Plan - Adaptive Management Plan – Water Sensitive EPBC Act Listed Species - Coal Wash Emplacement Area Management Plan Minor amendments to these documents were included in the revisions. The management plans were approved by the Minister. The Shale Sandstone Transition Forest Offset Management Plan was reviewed however does not require approval by the Minister.	Yes

Condition	Condition Summary	Status	Compliant 2021
17	<u>Minister's Modification to a Management Plan, Report, Strategy or Agreement</u> Comply with the minister's request to modify management plans, reports, strategies or agreements.	No requests received from the Minister for modifications in this reporting period.	Yes
18	<u>Independent Auditor</u> Commission and pay the full cost for independent environmental auditor of the project.	Independent audits were carried out in accordance with the conditions in 2013/14, 2017 and 2019. This most recent report is available on the South32 website at: IEA 2019 . There was no audit undertaken in this reporting period. The next audit will take place in 2022.	Yes
19	<u>Unsatisfactory Commencement of Action</u> If work has not commenced within 5 years of approval, written approval needs to be obtained from the minister.	Work commenced on 15 May 2012 as per date of commencement letter sent to the Department.	Yes

BULLI SEAM OPERATIONS
Broad-headed Snake and Southern Brown Bandicoot Management Plan
APNMP0111
Management Plan Version 1.1

AUDIT REVIEW			Outcome	Comment	Proposed Action
Section	MP Ref.	Requirement / Obligation			
Management Strategies	6.1	Clearing practices will incorporate appropriate controls to minimise mortality and injury to Broad-headed Snakes and Southern Brown Bandicoots occupying the site.	In Control	Clearing practices involve a two-staged process as required by the MP.	
Pre clearance surveys	6.1.1	Prior to the first stage of clearing, the area to be cleared will be marked using flagging and surveyed by an ecologist or suitably trained site environmental representative to locate, record and mark specific habitat features that are proposed for preservation and redistribution to the emplacement (e.g. rocks and boulders, stags and large hollows).	In Control	Pre-clearing assessment undertaken as required which contains instructions for redistributing habitat	
Two stage Clearing	6.1.2	Where possible, (i.e. where access to trees by the excavator is safe and practical), clearing of hollow bearing trees will be performed in a two stage process where surrounding vegetation is cleared separately, before the removal of habitat trees to allow fauna an opportunity to move.	In Control	Clearing practices involve a two-staged process as required by the MP. Pre-clearing assessment undertaken as required which contains instructions for redistributing habitat.	
Management of Captured Animals	6.1.3.1	If a Broad-headed Snake is found during the two-stage clearing process, the animal will be relocated to pre-determined suitable habitat within the Appin North surface mining lease area	In Control	In April 2016, one individual Broad-headed Snake was found in the Stage 3 area during a pre-clearing survey. The individual was captured and released to another location in accordance with this Plan. No other individuals have been located since.	

BULLI SEAM OPERATIONS

Broad-headed Snake and Southern Brown Bandicoot Management Plan

APNMP0111

Management Plan Version 1.1

Management of Captured Animals	6.1.3.1	Pre-determined sites for relocation will take into account the species home ranges and be evenly spaced to avoid social conflict. Ideally, predetermined relocation sites should not be inhabited by another Broad-headed Snake at the time of relocation.	In Control	In April 2016, one individual Broad-headed Snake was found in the Stage 3 area during a pre-clearing survey. The individual was captured and released to another location in accordance with this Plan. No other individuals have been located since.	
Management of Captured Animals	6.1.3.1	Pre-determined relocation sites will necessarily consist of the following: <ul style="list-style-type: none"> • occur on Hawkesbury Sandstone within the current known range of the species and provide rocky outcrops with a westerly or north-westerly aspect, and horizontal crevices (Webb and Shine 1998c); and/or • have large adjacent areas of woodland that support large stags or trees bearing numerous hollows (Webb and Shine 1997b). The adjacent woodland will ideally be larger than the area supporting rocky outcrops (Webb and Shine 1997a) and contain preferred species of 'habitat trees' (trees most often selected by Broad-headed Snakes) such as <i>Eucalyptus gummifera</i>, <i>E. punctata</i>, <i>E. agglomerata</i> and <i>E. piperita</i> (Webb and Shine 1997b). 	In Control	The snake found in April 2016 was relocated to pre-determined habitat in accordance with Figure 3 of the MP.	
Management of Captured Animals	6.1.3.1	Any other fauna located within the CWEA during the pre-clearing survey will also be relocated. In particular, any Velvet Geckos (and other lizards) encountered will be relocated to the same pre-determined sites for Broad-headed Snakes to provide prey for the relocated snakes.	In Control	Not triggered	

BULLI SEAM OPERATIONS

Broad-headed Snake and Southern Brown Bandicoot Management Plan

APNMP0111

Management Plan Version 1.1

Management of Captured Animals	6.1.3.1	Where possible, snakes will be translocated from the initial capture point to the nearest site considered suitable for the long-term habitation by the species, but not more than 1 km from that point (where possible) to reduce the possibility for unfavourable genetic mixing. Snakes will be released at sites as soon as practicable after capture.	In Control	The snake found in April 2016 was relocated to pre-determined habitat in accordance with Figure 3 of the MP.	
Management of Captured Animals	6.1.3.1	BCD will be notified within one month of any Broad-headed Snakes identified during preclearing surveys and relocated.	In Control	Not triggered	
Management of Captured Animals	6.1.3.2	Sites for relocation will take into account the species home ranges and be evenly spaced to avoid social conflict. Where possible, captured bandicoots will be translocated from the initial capture point to the nearest site considered suitable for the long-term habitation by the species, but not more than 1 km from that point (where possible) to reduce the possibility for unfavourable genetic mixing.	In Control	Not triggered	
Management of Captured SBBs	6.1.3.2	Bandicoots will be released at sites as soon as practicable after capture.	In Control	Not triggered	
Habitat Translocation - Broad-headed Snake	6.1.4	Suitable winter habitat occurring within the Stages 3 and 4 of the Emplacement Area will be identified during the pre-clearing survey.	In Control	Pre-clearing assessment undertaken as required which contains instructions for redistributing habitat.	

BULLI SEAM OPERATIONS

Broad-headed Snake and Southern Brown Bandicoot Management Plan

APNMP0111

Management Plan Version 1.1

Habitat Translocation - Broad-headed Snake	6.1.4	<p>Rehabilitation of the CWEA behind the line of clearing for the Broad-headed Snake, in terms of winter habitat, will include the following:</p> <ul style="list-style-type: none">• Translocated rocky outcrops and boulders will ideally be positioned with a westerly or north-westerly aspect and crevices should remain horizontal (Webb and Shine 1998c; Goldingay and Newell 2017).• The Velvet Gecko should also be translocated (Webb and Shine 2000). Suitable habitat for this prey species is the same as for the Broad-headed Snake's winter habitat and includes loose rock on rock substrate (Shine et al. 1998, Webb and Shine 1998c, Croak et al. 2013).• The above shelter sites will ideally be evenly spaced and not clumped together to encourage a greater number of Broad-headed Snakes to the area (Webb and Shine 1997a). If shelter sites are too close together, they are likely to remain uninhabited due to home range overlap. Shelter sites will ideally be placed at least 300 m apart and close/adjacent to suitable summer habitat (translocated hollow-bearing trees or limbs within rehabilitating sections of the old CWEAs (Webb and Shine 1997a))	In Control		Install artificial pavers on a westerly facing section of the emplacement area. This project was not completed in FY21 and is planned for FY22.
--	-------	---	------------	--	---

BULLI SEAM OPERATIONS

Broad-headed Snake and Southern Brown Bandicoot Management Plan

APNMP0111

Management Plan Version 1.1

		<ul style="list-style-type: none"> • Artificial rocks/concrete pavers will be added to the CWEA behind the line of clearing to increase habitat opportunities for prey items and the Broad-headed Snake if insufficient natural rock cannot be sourced from the CWEA for this purpose. Webb and Shine (2000) recommend the use of large pavers (30 – 45 cm wide and 5 – 10 cm thick), as well as a range of smaller pavers (e.g. 19 cm wide) and thicker pavers (e.g. > 30 cm thick) placed with a variety of crevice sizes (up to 10 mm). The artificial rocks will be placed in both shaded and exposed areas to provide a range of suitable micro-climates for the snake and its prey depending on the time of year (Croak et al. 2013, Croak et al. 2008, Croak, et al. 2010). • Hollow logs and hollow-bearing stags will also be translocated to provide additional retreat-sites for the Broad-headed Snake and its prey (Webb and Shine 1997b). 			
Habitat Protection during construction	6.1.5	Sediment control measures will be adopted during clearing, as outlined in the CWEAMP.	In Control	Incorporated into emplacement design requirements	
Habitat Protection during construction	6.1.5	The CWEA will be clearly demarcated and regularly surveyed to prevent unnecessary clearing or access by construction vehicles and plant to surrounding potential habitat.	In Control	Emplacement boundaries are defined on digital plans and bounded by haul roads and diversion drains.	

BULLI SEAM OPERATIONS

Broad-headed Snake and Southern Brown Bandicoot Management Plan

APNMP0111

Management Plan Version 1.1

Habitat Protection during construction	6.1.5	Construction materials and spoil must not be stored, dumped or stockpiled within surrounding habitat.	In Control	Stockpiling of freshly stripped topsoil is avoided through progressive rehabilitation. There are some stockpiles onsite containing topsoil material from the original stage 3 emplacement development construction; however this is strategically set aside for future capping material as the emplacement progresses down the valley. These stockpiles are stable and non-polluting and situated within the approved disturbance footprints.	
Habitat Protection during construction	6.1.5	Induction of the CWEA Supervisory personnel will include information about the Southern Brown Bandicoot and its habitat within Stage 4 of the CWEA, along with protection measures that will be in place and enforced during the construction period.	In Control	Construction in Stage 4 has not yet commenced.	

BULLI SEAM OPERATIONS

Broad-headed Snake and Southern Brown Bandicoot Management Plan

APNMP0111

Management Plan Version 1.1

Habitat Protection during construction	6.1.5	General information on threatened species (including key site contacts for threatened species) will be provided to all CWEA personnel.	In Control	In late 2020 the Emplacement operational personnel were refreshed on the requirements for threatened species during emplacement construction.	
Summary of Impact Minimisation Strategies	6.2/ Table 3	Vegetation clearing to be within approved boundaries	In Control	Boundaries set out in Emplacement MP	
Summary of Impact Minimisation Strategies	6.2/ Table 3	Future development requiring land clearing to consider Broad-headed Snake and Southern Brown Bandicoot individuals.	In Control	Any additional clearing (outside the emplacement area) onsite will consider internal and external approval requirements.	
Summary of Impact Minimisation Strategies	6.2/ Table 3	Conduct pre-clearance surveys in the Stage 3 and 4 CWEAs and subsequent two-stage clearing, to give animals the opportunity to move away. Individuals found will be relocated to pre-determined suitable habitat within the Appin North surface mining lease area.	In Control	Two-stage clearing processes are being followed as required. No SBB individuals have been found to date. The BHS found in April 2016 was relocated to pre-determined habitat in accordance with Figure 3 of the MP.

Broad-headed Snake and Southern Brown Bandicoot Management Plan

APNMP0111

Management Plan Version 1.1

Provision of Regional Funding	7.1	<p>Illawarra Coal (IC) has funded \$250,000 towards the regional management of the Southern Brown Bandicoot and Broad-headed Snake programs as outlined in this Plan and as detailed in the Offset Strategy (Appendix 5).</p> <p>The project took place over three years commencing July 2014 and finishing June 2017 with payments issued as follows:</p> <ul style="list-style-type: none"> • Year 1 \$85,000 July 2014. • Year 2 \$85,000 July 2015. • Year 3 \$80,000 July 2016. 	In Control	Program completed as required	
Actions to be funded	7.2	<p>OEH developed a Project Proposal to be funded by IC, which addressed points (c) to (f) of the EPBC Approval Condition 7.</p> <p>The Project Proposal, OEH Letter of endorsement and BHPBilliton letter of endorsement are provided in Appendix 5, Appendix 6 and Appendix 7 respectively.</p>	In Control	The (then) NSW Office of Environment and Heritage (OEH) developed a Project Proposal to be funded by IC, which addresses points (c) to (f) of the EPBC Act Approval Condition 7.	
Impacts to other EPBC Act Listed Species	7.3	<p>Condition 7(d) of the EPBC Approval for works conducted by OEH as follows:</p> <p>(d) a demonstration that management actions to be undertaken will not adversely impact EPBC Act listed species;</p> <p>The OEH Proposal addressed the above requirement (see section titled Consideration of Impacts of the Project).</p>	In Control	The OEH Proposal addressed the above requirement.	
Funding Arrangements	7.4	<p>OEH provided a Project Proposal for the Broad headed snake and Southern Brown bandicoot Recovery Actions (see Appendix 5).</p> <p>IC provided the funding through a Non-order Invoice (NOI). OEH issued three separate invoices, prior to the start of each financial year i.e. Year 1, Year 2 and Year 3.</p>	In Control	IMC provided the funding through a Non-order Invoice (NOI). OEH issued three separate invoices, prior to the start of each financial year i.e. year 1, year 2 and year 3.

Documentary Evidence of Funding	7.5	IC provided documentary evidence to the DoTE&E in September 2016 to satisfy this condition. The relevant results were included in the FY17 BSO Annual Review.	In Control	IMC provided documentary evidence to the DoTE&E in September 2016 to satisfy this condition. https://www.south32.net/docs/default-source/illawarra-coal-bulli-seam-operations/annual-review/bulli-seam-operations-project-annual-review-fy2017.pdf?sfvrsn=2ace739a_4	
Reporting	8.1.1	Annual reporting is undertaken as per Condition 14 of the EPBC Approval. The Compliance Report is required to be submitted to DAWE by 15 August of each year via EPBCMonitoring@environment.gov.au and is attached as an appendix in the Annual Review.	In Control	The Compliance Report has been submitted as required and attached as an Appendix in the Annual Review.	
Reporting	8.1.2	IMC will report on the performance of the SBMP in the Annual Review. The Annual Review is prepared in accordance with Condition 4 of Schedule 6 of the Project Approval and is submitted to relevant agencies in September each year. Annual Reviews are made available to the general public via the South32 website.	In Control	The Annual Reviews have been completed as required and published to the South32 website.

APNMP0111

Management Plan Version 1.1

Review of SBMP	8.2	<p>In accordance with Condition 5 of Schedule 6 of the Project Approval, the SBMP will be reviewed, and if necessary revised, within three months, of:</p> <ul style="list-style-type: none"> • the submission of an annual review; • the submission of an incident report; • the submission of an Independent Environmental Audit report; or • any modification to the conditions of the Project Approval (unless the conditions require otherwise). Outcomes from each review will be documented in the Management Plan Review Log. The SBMP will only be revised where a material change to site operations or environmental management has occurred, or in accordance with the review period on the SBMP. <p>Administrative or descriptive changes do not constitute a material change.</p> <p>Where a review triggers a revision of the SBMP, the SBMP will be revised and submitted to the Secretary and/or Minister for approval.</p>	In Control	<p>The SBB and BHS Management Plans were reviewed in FY21 and combined. The revised document was approved by DPIE on 18/12/2020 and by DAWE on 28/01/2021.</p> <p>The Management Plan Review log is being maintained.</p>	
Publication	12.3	<p>Condition 13 of the EPBC Approval requires the proponent to:</p> <p><i>...publish all management plans, reports, strategies or agreements required by these conditions of approval on their website. Each management plan, report strategy or agreement must be published on the website within 30 days of being approved.</i></p> <p>Approved versions of the SBMP will be displayed on the South32 regulatory page at: https://www.south32.net/our-business/australia/illawarra-metallurgical-coal/documents.</p>	In Control	<p>The approved SBMP is available on the South32 website.</p>

Broad-headed Snake and Southern Brown Bandicoot Management Plan

APNMP0111

Management Plan Version 1.1

Independent Environmental Audit	12.4.1	In accordance with Condition 9 of Schedule 6 of the Project Approval and Condition 18 of the EPBC Approval, an Independent Environmental Audit (IEA) shall be commissioned every three years, that will include a review of the SBMP. The report is required to be submitted to the Secretary within six weeks of completion of the audit, in accordance with Condition 10 of Schedule 6 of the Project Approval and Condition 18 of the EPBC Approval. IEAs have been conducted in 2013, 2016/17 and 2019, with the next IEA to be conducted in 2022. Recommendations from the IEA will be incorporated into the SBMP where appropriate.	In Control	The last IEA was conducted in 2019.	
ISO 14001	12.4.2	As part of the ISO 14001 certification, IMC maintains an environmental auditing and governance program across all of its operational sites. The program, which includes the use of competent internal and accredited external auditors, is an integral part of maintaining certification under the ISO 14001 standard. External surveillance audits are undertaken on an annual basis, with recertification audits undertaken every three years. Internal Governance Reviews of the SBMP are nominally undertaken on a three yearly basis.	In Control	The last Governance Review was undertaken in July 2020.	

BULLI SEAM OPERATIONS
 Persoonia Hirsuta Offset Management Plan
 ICHMP0249
 Management Plan Version 8

AUDIT REVIEW			Outcome	Comment & Evidence	Proposed Action
Section	MP Ref.	Requirement / Obligation			
Protection Mechanism	1.4.1	The Persoonia hirsuta Offset Area is protected by incorporating a condition into Consolidated Coal Lease No. 724 (CCL724)	In Control	Refer to lease conditions	
Protection Mechanism	1.4.1	The leaseholder must comply with the <i>Persoonia hirsuta</i> Offset Management Plan approved (and modified if applicable) in accordance with the requirements of the Bulli Seam Operations Expansion, Bulli, NSW (EPBC 2010/5350) Approval dated 15 May 2012, made under sections 130(1) and 133 of the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act Approval).	In Control	Last IEA was completed in 2019.	
Protection Mechanism	1.4.1	The leaseholder must provide the Department of Trade and Investment NSW - Mineral Resources Unit with a copy of the Compliance Report required by condition 14 of the EPBC Act Approval at the same time that the report is published in accordance with the requirements of Condition 14.	Improvement opportunity	The Compliance Report for FY20 was provided as an Appendix to the Annual Review, that was submitted to the Resources Regulator at the end of September each year. The FY21 Compliance Report will be submitted at the same time as it is submitted to DAWE.	

BULLI SEAM OPERATIONS

Persoonia Hirsuta Offset Management Plan

ICHMP0249

Management Plan Version 8

Protection Mechanism	1.4.1	The leaseholder must also provide Department of Trade and Investment NSW - Mineral Resources Unit with a copy of the Audit Report required by Condition 18 of the EPBC Act Approval as soon as practicable following confirmation that the Audit Report addresses the audit criteria to the satisfaction of the Minister responsible for the administration of the EPBC Act (or their delegate).	In Control	The triennial audit reports are provided to the Resources Regulator as required. The last IEA was undertaken in 2019.

Persoonia Hirsuta Offset Management Plan

ICHMP0249

Management Plan Version 8

Protection Mechanism	1.4.1	<p>In the event that the Persoonia offset cannot achieve the objectives of Conditions 1 and 2, Illawarra Coal will provide an offsite offset or alternative offset if:</p> <ul style="list-style-type: none"> - Annual surveys over the period 2037 – 2039 (both inclusive) demonstrate that the P. hirsuta core population has not been maintained or enhanced to the satisfaction of the Department. An offsite offset to be agreed by the department must be provided. The offsite offset must be secured by a legal mechanism acceptable to the Department six months prior to the expiry date of the EPBC approval (by 18 December 2041). In the event it can be demonstrated that a suitable offsite offset could not be found, Illawarra Coal will provide an alternative compensatory measure commensurate with the requirements of approval condition 1 to the satisfaction of the Department, or - CCL724 is not renewed or is revoked at any time prior to the expiry date of the EPBC approval (15 May 2042). An alternative offset to be agreed by the Department must be secured by a legal mechanism acceptable to the Department within two years of the relinquishment or revocation of CCL724. In the event it can be demonstrated that a suitable alternative offset could not be 	In Control	Not triggered.	
----------------------	-------	--	------------	----------------	--

BULLI SEAM OPERATIONS

Persoonia Hirsuta Offset Management Plan

ICHMP0249

Management Plan Version 8

		suitable alternative offset could not be found, Illawarra Coal will provide an alternative compensatory measure commensurate with the requirements of approval condition 1 to the satisfaction of the Department.			
Review of the MP	1.5	This Plan will be reviewed in accordance with Condition 2(l) i.e. the findings from the research programs required by Conditions 3 will be incorporated into the approved Persoonia hirsuta Offset Management Plan and the revised plan will be re-submitted to the Minister for approval within 6 months of the research being finalised, i.e. within 6 months of 15 May 2021.	In Control	The research report was submitted to DAWE on 29 June 2021 in accordance with Condition 3e of EPBC Approval 2010/5350. The Offset Management Plan will be reviewed within 6 months of 15 May 2021.	
Persoonia Monitoring	4.1.2	All extant plants will be inspected annually to record the following attributes: * Height and width to measure growth rates; * Age class and Condition to assess reproductive activity, age to maturity overall health of the population etc; * Visual observations for any seedlings; and * Comments on any imminent threat or risk to the plants health (e.g. apparent disease, excessive dust deposition) to assess the effectiveness of management actions contained within this plan.	In Control	See Annual Persoonia health monitoring report that is submitted each year to DAWE.	

BULLI SEAM OPERATIONS

Persoonia Hirsuta Offset Management Plan

ICHMP0249

Management Plan Version 8

Persoonia Monitoring	4.1.2	Height will be measured using a tape measure, measuring from the ground surface to the highest point on the plant, without physically moving any part of the plant. Condition will be defined using a combination of factors, including the percent cover of leaves, colour of leaves and the presence or absence of fruit or flowers, rating condition from 0 to 6, or from very poor condition to excellent condition (Appendix A). All plants have been recorded with a Garmin GPS and flagged with fluorescent, biodegradable flagging tape and given a unique ID.	In Control	Monitoring methods as per the above.	
Survey Timing	4.1.3	The survey will be conducted from late spring into early summer which is the peak flowering period for the species.	In Control	Monitoring is undertaken during the peak flowering season. This does change slightly depending on season but generally falls late Spring into early summer.	
Reporting	4.1.4	In accordance with Condition 2 (h) of the EPBC approval, the results of the monitoring will be provided to the Department within 30 days of every 12 month anniversary of the implementation date of this Plan.	In Control	2020 report was submitted on 22 December 2020 as required.	

BULLI SEAM OPERATIONS

Persoonia Hirsuta Offset Management Plan

ICHMP0249

Management Plan Version 8

Research	5	South32 Illawarra Metallurgical Coal has engaged the University of Wollongong and Royal Botanic Gardens Trust to conduct research on Persoonia hirsuta. The aim of the research is to gain a better understanding of the ecology and genetics to satisfy Condition 3 of the EPBC Act approval. A summary of the research undertaken to-date as well as the research planned is provided in Table 3.	In Control	<p>Research is now underway at the Mt Annan Royal Botanic Gardens as per strategy.</p> <p>The research report was submitted to DAWE on 29 June 2021 in accordance with Condition 3e of EPBC Approval 2010/5350.</p>	
Research	5	As new information becomes available regarding the local population of P. hirsuta, this will be incorporated into the Management Plan revisions as required.	In Control	<p>The research report was submitted to DAWE on 29 June 2021 in accordance with Condition 3e of EPBC Approval 2010/5350.</p> <p>The Offset Management Plan will be reviewed to incorporate the outcomes of the research.</p>	
Research	5	In accordance with the conditions, South32 Illawarra Metallurgical Coal will prepare a research report and this will be made available on the Company's website in accordance with Condition 3 (f) of the EPBC Act approval.	In Control	<p>The research report was submitted to DAWE on 29 June 2021 in accordance with Condition 3e of EPBC Approval 2010/5350.</p> <p>The research report has been published on the South32 website.</p>	
Performance Objectives and Management Actions	6	1a. Secure Offset by the required timeframe i.e. 15 May 2014.	In Control	Offset secured as per timing requirements.	

BULLI SEAM OPERATIONS

Persoonia Hirsuta Offset Management Plan

ICHMP0249

Management Plan Version 8

Performance Objectives and Management Actions	6	1b.Offset must include a minimum area of suitable habitat to support at least 150 <i>P. hirsuta</i> plants.	In Control	As per the Offset Management Plan.	
Performance Objectives and Management Actions	6	1c.Maintain or increase the number of individual plants in the Offset area relative to the 2012 baseline population (~44 plants).	In Control	Two translocations have been undertaken to Appin North (Autumn 2019 and Autumn 2021).	Continue to monitor translocated <i>Persoonia</i> plants.
Performance Objectives and Management Actions	6	2a. Develop a <i>P. hirsuta</i> research strategy	In Control	Research strategy is included in the MP.	
Performance Objectives and Management Actions	6	2b. Targeted research commenced by July 2013	In Control	Targeted research has been underway since 2013.	
Performance Objectives and Management Actions	6	2c. Research findings published by 30 June 2021 as per the EPBC Act consent.	In Control	The research report was submitted to DAWE on 29 June 2021 in accordance with Condition 3e of EPBC Approval 2010/5350.	
Performance Objectives and Management Actions	6	3a. No loss of <i>Persoonia hirsuta</i> in the offset area due to land clearing or operational activities	In Control	Plants in an exposed position are clearly demarcated. There has been no loss due to land clearing or operational activities. Permit to Disturb process is in place (IMCF0209).	

BULLI SEAM OPERATIONS

Persoonia Hirsuta Offset Management Plan

ICHMP0249

Management Plan Version 8

Performance Objectives and Management Actions	6	3b. No loss of <i>Persoonia hirsuta</i> in other areas of site (outside the approved emplacement and development footprints) due to land clearing or operational activities.	In Control	Plants in an exposed position are clearly demarcated. There has been no loss due to land clearing or operational activities.	
Performance Objectives and Management Actions	6	3c. Avoidance of surface runoff from emplacement areas entering the <i>Persoonia hirsuta</i> Offset Area	In Control	Routine inspections of the Offset have not identified any issues regarding surface runoff from emplacement areas. Stage 4 emplacement construction has not yet commenced. Stage 3 is buffered by a haul road separating the Offset from the active disturbance areas. Drainage from disturbance areas is directed to dedicated catchment ponds. Drainage will be incorporated into the design of Stage 4 emplacement. Not yet required.	
Performance Objectives and Management Actions	6	3d. Restrict access to offset area	In Control	Signage in place. Access to Appin North is restricted. Permit to Disturb process in place. The area is not fenced to allow unimpeded access for wildlife and pollination vectors across the site.	
Performance Objectives and Management Actions	6	3e. Minimise weed infestation within the Offset Area	In Control	Minor weed control is undertaken by experienced personnel for perennial grasses on the powerline easement.	Weed control is ongoing.

BULLI SEAM OPERATIONS

Persoonia Hirsuta Offset Management Plan

ICHMP0249

Management Plan Version 8

Performance Objectives and Management Actions	6	3f. Minimise dust impacts to <i>Persoonia hirsuta</i> from operations	In Control	Dust from emplacement areas is mitigated by the wet coal washing process and the compaction of emplaced coal wash. Areas are rehabilitated as soon as practicable. Watercarts are in use on the active emplacement area. Routine inspections of the Offset have not identified any issues regarding dust impacts.	
Performance Objectives and Management Actions	6	4. Adequate regeneration of emplacement as per the Approved Emplacement Management Plan.	In Control	As per Annual Emplacement Rehabilitation Report.	
Performance Objectives and Management Actions	6	Soil translocation protocols and re-vegetation protocols to be implemented as per the West Cliff Coal Wash Emplacement Area Management Plan e.g. Topsoil from the donor site will be stripped from the surface in layers. The most valuable layer is the top 50 mm of soil which contains the majority of soil stored seed and propagules, plant nutrients and beneficial soil microbes.	In Control	As per CWEA Emplacement MP	
Performance Objectives and Management Actions	6	<i>Persoonia hirsuta</i> individuals within the approved emplacement and development footprints may be translocated to the rehabilitating emplacement.	In Control	Not required at this stage.	

BULLI SEAM OPERATIONS

Persoonia Hirsuta Offset Management Plan

ICHMP0249

Management Plan Version 8

Performance Objectives and Management Actions	6	Introduce successfully propagated plants (or seed from propagated plants) from the nursery at Royal Botanic Gardens to the rehabilitating emplacement (or other suitable areas outside the emplacement and disturbance footprints).	In Control	Translocation of Persoonia plants from the nursery to the emplacement (Stage 2) was undertaken in Autumn 2021.	
Performance Objectives and Management Actions	6	Annual rehabilitation survey will be conducted and a report attached to the BSO Annual Review.	In Control	Annual report is attached as an appendix each year to the Annual Review. The 2020 rehabilitation report was submitted to DAWE via email on 21 July 2021.	

BULLI SEAM OPERATIONS

Adaptive Management Plan for Water Sensitive EPBC Act Listed Species

IMCMP0253

Version 6

AUDIT REVIEW			Outcome	Comment & Evidence	Proposed Action
Section	MP Ref	Requirement / Obligation			
Monitoring and Adaptive Management Framework	3	Potential impacts from mining induced subsidence is monitored and managed via an Extraction Plan which is to be approved by the Secretary of DPIE prior to longwall mining commencing in any area.	In Control	Extraction plans in place for Area 9. SMP for Area 7.	
Ecological Outcomes and Performance Measures	5	The "Trigger-Action-Response Plans (TARPs)" relate to identifying, assessing and responding to the range of conditions related to potential subsidence impacts on the Rivers which form the potential habitat for Macquarie Perch which is the primary species of management concern in this Plan. Detailed performance indicators are outlined in the Extraction Plan TARPs for each mining area.	In Control	Refer to each Extraction Plan/SMP.	
Ecological Outcomes and Performance Measures	5	If any impact is recorded, consideration would be given to implementing appropriate management, remediation and/or mitigation measures in consultation with Biodiversity and Conservation Division, DAWE and other relevant stakeholders (refer Section 9). If the performance measures are exceeded, IMC will notify relevant stakeholders and implement the Contingency Plan (Section 10).	In Control	Recorded impacts are reported to relevant agencies in line with the Trigger Action Response Plan (TARP). This includes initiating discussion around remediation measures. The Georges River Rehabilitation Plan has been developed, incorporating detailed feedback from agencies, prior to being approved by DPIE and the Resources Regulator. Additional approvals will be sought to undertake the remediation, as per the plan.	Execute the Georges River Rehabilitation Plan, once all necessary approvals in place.

BULLI SEAM OPERATIONS

Adaptive Management Plan for Water Sensitive EPBC Act Listed Species

IMCMP0253

Version 6

Water Requirements for Fish	6.1	Macquarie Perch could be impacted by subsidence through reduced habitat availability through pool diminution and possible discontinuity in smaller tributaries. These impacts are largely mitigated through the Mine Plan or longwall layout that does not longwall mine below rivers and aims to avoid impacts to critical ecological assets such as the Macquarie Perch.	In Control	No Macquarie Perch have been identified within mining areas. Longwall mining does not occur below named streams where Macquarie Perch are found.	Continue monitoring fish habitat in the mining areas.
Water Requirements for Fish	6.1	Any impacts to potential habitat for Macquarie Perch would be rehabilitated as part of the BSO Project.	N/A	There have been no impacts to known Macquarie Perch habitat.	Continue monitoring fish habitat in the mining areas.
Water Requirements for Fish	6.1	Through the implementation of programs to reduce pollutants and compliance with license requirements, impacts from mine water discharges such as the BCD discharge are mitigated.	In Control	EPL 2504 is in place at Appin North.	
Water Requirements for Fish	6.1	A water treatment plant (WTP) is planned for Appin North to provide an improvement in water quality released from site. It is planned for the WTP to release 1.5 ML/day averaged over the month.	In Control	A temporary water treatment plant (WTP) is currently operational, producing high quality water for discharge to Brennans Creek. A permanent WTP is under construction. Discharge from BCD will be modified once consistent flow from the WTP is achieved.	Complete construction of permanent WTP.
Water Requirements for Fish	6.1	Monitoring of mine water discharge and upstream and downstream water quality is an EPL requirement and is part of the ongoing management of mine water releases e.g. Brennans Creek.	In Control	As per EPL requirements.	

BULLI SEAM OPERATIONS

Adaptive Management Plan for Water Sensitive EPBC Act Listed Species

IMCMP0253

Version 6

Water Requirements for Fish	6.1	Hydrological and water quality monitoring of streams within the Project mining areas is conducted to determine any surface water and surface/ground water impacts. This monitoring will fall under the Extraction Plan process.	In Control	Localised impacts to fish habitat has occurred as predicted in the EIS. No listed species of fish have been impacted.	Continue monitoring fish habitat in the mining areas.
Water Requirements for Amphibians	6.2	No EPBC listed threatened amphibian species have been recorded in the BSO project area therefore it is highly unlikely that project discharges will affect any populations. Subsidence related impacts may affect small permanent, semi-permanent pools which they require to complete their life cycle. These impacts are largely mitigated through the mine planning that aims to avoid critical ecological areas.	In Control	No EPBC listed threatened amphibian species have been recorded in the BSO project area.	Continue monitoring impacts in the mining areas.
Monitoring Overview	8.1	There are no records for Macquarie Perch within the Project Area. Potential habitat occurs in the project area but the species is highly unlikely to be present due to numerous fish barriers in the subject watercourses. A precautionary approach has been taken and routine aquatic monitoring (including fish sampling) is being undertaken in the relevant watercourses.	In Control	No Macquarie Perch have been identified within mining areas. Longwall mining does not occur below named streams where Macquarie Perch are found.	Continue monitoring fish habitat in the mining areas.

BULLI SEAM OPERATIONS

Adaptive Management Plan for Water Sensitive EPBC Act Listed Species

IMCMP0253

Version 6

Monitoring Overview	8.1	There are no records for either the Giant Burrowing Frog or Littlejohns Tree Frog within the Project Area despite targeted surveys for these species. Marginal potential habitat exists within the Project Area but the species are unlikely to be present due to lack of preferred habitat. Accordingly, no targeted monitoring is proposed for these species unless unpredicted impacts occur or these species are detected.	In Control	No EPBC listed threatened amphibian species have been recorded in the BSO Project Area.	Continue monitoring impacts in the mining areas.
Monitoring Overview	8.1	Potential habitat for the Woronora Beard-heath (<i>Leucopogon exolasius</i>) occurs within the Georges River but there are no records for this species within the Project Area despite survey completed for this species. Accordingly, no targeted monitoring is proposed for these species unless this species is detected in the project area.	In Control	Potential habitat for the Woronora Bearded Heath (<i>Leucopogon exolasius</i>) occurs within the Georges River but there are no records for this species within the Project Area despite survey completed for this species.	Continue monitoring impacts in the mining areas.
Table 4 Monitoring Summary for Macquarie Perch	8.1	Aquatic monitoring (including fish sampling) via the Appin Area 7 Longwalls 701 – 710 Extraction Plans (Biodiversity Management Plan). Refer Section 8.2, Figure 10 and Appendix 3.	In Control	Monitoring plan in place.	Continue monitoring impacts in the mining areas.
Table 4 Monitoring Summary for Macquarie Perch	8.1	Aquatic monitoring (including fish sampling) via the West Cliff Area 5 Longwall 34 - 36 Extraction Plans (Biodiversity Management Plan). Refer Section 8.2, Figure 11, Appendix 4 and Appendix 5.	In Control	Monitoring plan in place.	Continue monitoring impacts in the mining areas.

Version 6

Aquatic Monitoring Methods	8.2.3	<p>The following habitat features are recorded:</p> <ul style="list-style-type: none"> * in-stream features such as sequence of pools, runs and riffles; * stream substratum; * presence, type and extent of aquatic vegetation; * presence of barriers to fish passage into and beyond the study area; and * a photographic record of the habitat. 	In Control	Refer Georges River Aquatic Health Monitoring Program methods.	
Aquatic Monitoring Methods	8.2.3	<p>Water quality will be measured at each site using a water quality probe. Variables to be measured include; pH, dissolved oxygen, oxidation-reduction potential, temperature, turbidity and conductivity. Where applicable, the results will be compared to ANZECC (2000) water quality guidelines for the protection of aquatic ecosystems.</p>	In Control	Georges River Aquatic Health Monitoring Program is in place.	Continue monitoring in line with plans.
Aquatic Monitoring Methods	8.2.3	<p>Fish will be sampled using a back-pack electro fisher and baited traps. At each site, six baited traps are to be deployed in a variety of habitats such as amongst aquatic plants and snags, in deep holes and over bare substratum. The back-pack electro fisher is to be operated around the edge of pools and in riffles. At each site, four, two minute shots are to be performed. Fish are to be collected in a scoop net, identified and measured. Native species are to be released unharmed whilst exotics are not to be returned to the water.</p>	In Control	Georges River Aquatic Health Monitoring Program has no requirement to monitor fish. This is only relevant to extraction plan monitoring.	Continue monitoring impacts in the mining areas.

IMCMP0253

Version 6

Aquatic Monitoring Methods	8.2.3	At each site macroinvertebrates will be sampled using the AusRivAS protocol developed under the National River Health Program. Where available, riffle and edge habitats will be sampled using a dip net along a 10m stretch of habitat. Samples will be sorted in the field, preserved in alcohol and transported to a laboratory for identification. Taxa will be identified to levels required for calculating SIGNAL2 values according to the AusRivAS protocol.	In Control	Monitoring plan in place.	Continue monitoring impacts in the mining areas.
Aquatic Monitoring Methods	8.2.3	Reports will be produced at the conclusion of each aquatic monitoring survey that provide sufficient information to describe the habitats and biota that may be affected by subsidence or Appin Mine water releases.	In Control	Refer to last EIP report on South32 website: https://www.south32.net/docs/default-source/illawarra-coal-bulli-seam-operations/licenses/eip2-2020-report_final.pdf?sfvrsn=a813859a_6	Continue monitoring impacts in the mining areas.
Management Responses Monitoring Methods	8.2.4	If level 3 TARPs are triggered within potential Macquarie Perch habitat, Corrective Management Actions (CMAs) such as additional monitoring, habitat rehabilitation or other adaptive management measures will be considered.	In Control	No Macquarie Perch identified.	Continue monitoring impacts in the mining areas. Annual reports to be uploaded to the S32 web page.
Management Responses Monitoring Methods	8.2.4	Monitoring results will be reviewed by the IMC Subsidence Management Committee and determine whether performance indicators have been exceeded; and whether CMAs are required.	In Control	Monthly meetings are conducted.	Continue with meetings and documentation.

BULLI SEAM OPERATIONS

Version 6

Management Responses Monitoring Methods	8.2.4	If the findings of monitoring are deemed to warrant an immediate response, the Manager Approvals will initiate the requirements of the TARP.	In Control	Actions are implemented as required and reported in the Monthly Subsidence Meeting Minutes.	Continue with meetings and documentation.
Terrestrial Biodiversity Monitoring Methods	8.3.2	Terrestrial monitoring occurs over longwall mining areas (i.e. Appin Area 7, Appin Area 9 and West Cliff Area 5) and focuses on detecting significant changes to vegetation communities and fauna habitat present within the mining area and aims to ensure complete coverage across the Study Area. Specific targeted monitoring sites will be determined if justified (e.g. if threatened species populations, EECs or habitats are known and have more than a negligible potential to be impacted).	In Control	Monitoring plan in place.	Continue monitoring impacts in the mining areas. Annual reports to be uploaded to the S32 web page. Negligible impact to EECs, habitats or populations to date.
Terrestrial Biodiversity Monitoring Methods	8.3.2	Inspections of vegetation communities within the mining areas is undertaken as a part of routine landscape and water monitoring programs. Targeted inspection by a qualified ecologist will follow should vegetation health changes be observed.	In Control	No vegetation health changes detected to date.	Continue monitoring impacts in the mining areas.

Version 6

Terrestrial Biodiversity Monitoring Methods	8.3.2	This information will be used to objectively assess extent and degree of impact. Assessment of similar vegetation communities or fauna habitat within the broader locality will be undertaken to determine if the detected changes are within normal variation or represent a possible impact of mining. Additional studies (e.g. gas release measurements) will be commissioned in response to an observed mining impact to understand the mechanism involved and consider any CMAs that may be required.	In Control	No vegetation health changes detected to date.	Continue monitoring impacts in the mining areas.
Terrestrial Biodiversity Monitoring Methods	8.3.2	Impacts are to be monitored as a part of ongoing observations to determine any change in extent or degree.	In Control	No vegetation health changes detected to date.	Continue monitoring impacts in the mining areas.
Terrestrial Biodiversity Monitoring Methods	8.3.2	The typical frequency of terrestrial biodiversity monitoring is: <ul style="list-style-type: none"> * two baseline monitoring campaigns 1 year prior to mining; * monthly visual inspections (as part of Landscape Features Monitoring), increased to weekly inspections during critical periods during mining; * six monthly monitoring for two years (as part of Landscape Features Monitoring) post mining; * general observation of active mining areas during all other monitoring. 	In Control	No vegetation health changes detected to date.	Continue monitoring impacts in the mining areas.

IMCMP0253

Version 6

Terrestrial Biodiversity Monitoring Methods	8.3.2	IMC will implement remediation measures where impacts to vegetation communities or fauna habitat are deemed to be caused by subsidence effects.	In Control	Georges River Rehabilitation Plan has been approved by DPIE and the Resources Regulator. Additional approvals will be sought to undertake the remediation, as per the plan.	Execute the Georges River Rehabilitation Plan, once all necessary approvals in place.
Monitoring methods for <i>Leucopogon exolasius</i>	8.4.2	Standard monitoring will be conducted as per Section 8.3.2. Any future targeted monitoring for this species may include (but not be limited to): * Fixed photo points. * Fixed vegetation quadrats. Data collected from each quadrat may include species richness, community structure and composition, vegetation condition, mortality and recruitment, the presence of soil profile development (leaf litter, presence/absence of invertebrates). * Random meander transects in targeted monitoring areas in order to identify recruitment.	In Control	<i>Leucopogon exolasius</i> not identified in monitoring program.	Continue monitoring impacts in the mining areas.
Water Monitoring Overview and Context for EPBC Listed Species	8.5.1	Water releases from surface operations are monitored and managed via the relevant management plans as shown in Diagram 1.	In Control	Refer to Appin Mine Water MP, Coal Wash Emplacement MP and Georges River Aquatic Health Monitoring Program on the South32 website.	
Water Monitoring Overview and Context for EPBC Listed Species	8.5.1	Impacts associated with longwall mining areas are addressed through specific Extraction Plans (and their associated Water Management Plans).	In Control	Extraction plans/SMPs for Area 7 and 9 are on South32 website. https://www.south32.net/our-business/australia/illawarra-metallurgical-coal/documents

IMCMP0253

Version 6

Water Monitoring for Potential Impacts from Mining Induced Subsidence	8.5.2	Extractions Plans with detailed monitoring programs are submitted on a progressive basis as mining commences in each mining domain.	In Control	Approved monitoring plans in place.	Continue monitoring impacts in the mining areas.
Water Monitoring for Potential Impacts from surface Operations	8.5.3	Potential impacts from Appin Mine surface operations are monitored and managed via the Water Management Plan and EPL 2504 (Appendix 7).	In Control	Refer to Appin Mine Water MP, Coal Wash Emplacement MP and Georges River Aquatic Health Monitoring Program on the South32 website.	
Monitoring Parameters and Performance Indicators	8.5.4	EPL 2504 regulates, among other things, the discharge of water from the surface operations into receiving waters. Quantified limits are currently stated in EPL 2504 for a range of parameters. These limits are effectively the surface water quality performance indicators for the AMP as they are aimed at maintaining suitable water quality to support downstream aquatic habitat for species such as Macquarie Perch.	In Control	EPL 2504 is in place.	
Monitoring Parameters and Performance Indicators	8.5.4	Monitoring is conducted monthly	In Control	Monthly samples are collected as required by EPL 2504	

BULLI SEAM OPERATIONS

Adaptive Management Plan for Water Sensitive EPBC Act Listed Species

IMCMP0253

Version 6

Summary of Performance Measures	9.1	The implementation of remedial or adaptive management measures would be assessed through the results of the Extraction Plan monitoring programs, EPL (surface water discharge) monitoring and additional detailed assessments as required.	In Control	Georges River Remediation Plan and Georges River Aquatic Health Monitoring Program.	
Summary of Performance Measures	9.1	In the event the Performance Measures detailed in Table 7 of the AMP are considered to have been exceeded, or are likely to be exceeded, IMC will implement a Contingency Plan (refer Section 10) to manage any unpredicted impacts and their consequences. Such an exceedance would normally represent a Level 3 TARP for surface water quality, flow or aquatic habitat being triggered.	In Control	No Macquarie Perch identified to date.	Continue monitoring impacts in the mining areas.
Adaptive Management Options - Mine Planning	9.2.1	If impacts exceed performance measures, adaptive management techniques will be considered, such as seeking variations to adjustment the length of planned longwalls. This has been implemented in the past for Longwall 34 in West Cliff Area 5 where Level 2 impacts were identified from Longwall 33.	In Control	No performance measures exceeded. Georges River Rehabilitation Plan has been approved by DPIE and the Resources Regulator.	Execute the Georges River Rehabilitation Plan, once all necessary approvals in place.

BULLI SEAM OPERATIONS

Adaptive Management Plan for Water Sensitive EPBC Act Listed Species

IMCMP0253

Version 6

Active Flow Management	9.2.2	During no or low rainfall periods the flow in the Georges River is largely determined by the volume of water discharged via licence discharge point 10 from BCD and from Appin East. If the Level 2 trigger for minor cracking leading to a reduction in pool water level is observed, then additional flow can be released from BCD and/or Appin East to ensure pool water levels are maintained.	In Control	Supplementary flows are and have been provided via BCD and from the temporary WTP at Appin North. The EPA and Georges River Stakeholder Group is regularly advised and where required, consulted on the discharge from BCD.	Complete construction of permanent WTP.
Water Quality and Discharge Management	9.2.3	Where low water quality is identified to be resulting from mining induced subsidence or surface discharges this exceeds relevant TARPs , consideration of appropriate CMAs will be undertaken with relevant stakeholders. Any CMA will be highly dependent on the parameter being exceeded and technical feasibility of interventions.	In Control	No performance measures exceeded. Georges River Rehabilitation Plan has been approved by DPIE and the Resources Regulator.	Execute the Georges River Rehabilitation Plan, once all necessary approvals in place.
Natural Remediation	9.2.4	While sealing of surface fractures will occur naturally in some instances and over time, it is recognised that this may not provide sufficient mitigation in some situations and that active sealing of the streams may be required in some locations.	In Control	Active sealing of streams, with the exception of Georges River, not yet triggered	
Hand Mortaring	9.2.5.1	Should large fractures occur in the base of the pools they may be sealed over with hand placed cement grout and natural oxides.	In Control	Georges River Rehabilitation Plan has been approved by DPIE and the Resources Regulator.	Execute the Georges River Rehabilitation Plan, once all necessary approvals in place.

BULLI SEAM OPERATIONS

Adaptive Management Plan for Water Sensitive EPBC Act Listed Species

Version 6

Injection Grouting	9.2.5.2	<p>These rehabilitation operations have the potential to cause adverse environmental impacts through the materials used and the disturbance associated with access and will be carefully planned to avoid contamination of watercourses. Bunds will be used to contain any spillage at mixing points. The materials used in these processes are non-toxic, environmentally inert and do not significantly impact upon the natural habitats of aquatic species.</p>	In Control	<p>Georges River Rehabilitation Plan approved by DPIE and the Resources Regulator incorporates these requirements.</p>	
Surface Treatment	9.2.5.6	<p>Where cracking develops in significant areas and natural sealing is not progressing, the cracks may require forking over and compacting to prevent subsequent erosion. Larger cracks may require more work to repair them, for example, mulch or other protection to prevent the development of erosion channels. Surface protection will remain in place until revegetation covers the disturbed area. In some cases, e.g. if the cracks are wider they may require gravel or sand filling up to surface level and revegetation using local native plants. Such rehabilitation measures have the potential to cause impact through the materials used and the disturbance associated with access. Considerable care and relevant approvals will be obtained to ensure the protection of the environment as such works are implemented.</p>	In Control	<p>No significant cracks have been observed that require remediation to prevent erosion. Fracturing in Georges River is covered by above sections 7.2.5 and 7.2.6</p>	

BULLI SEAM OPERATIONS

IMCMP0253

Version 6

Gas Releases	9.2.6	Where vegetation is impacted by gas releases, the areas affected will be revegetated once monitoring determines the gas releases have ceased or reduced to an extent that vegetation is no longer affected.	In Control	No vegetation health changes detected to date.	Continue monitoring impacts in the mining areas.
Gas Releases	9.2.6	Where low dissolved oxygen is identified to be resulting from mining induced gas release and this exceeds relevant TARPS, consideration of appropriate CMAS will be undertaken with relevant stakeholders.	In Control	No CMAs have been required as a result of low DO from gas release zones. Consideration includes agencies and specialist consultants.	Continue monitoring impacts in the mining areas.

BULLI SEAM OPERATIONS
 Coal Wash Emplacement Area Management Plan
 WCPMP0019
 Management Plan Version 5

AUDIT REVIEW			Outcome	Comment & Evidence	Proposed Action
Section	MP Ref.	Requirement / Obligation			
Scope	1.2	Emplacement construction and operations will be conducted in accordance with the detailed design plans prepared for each emplacement phase. Due to the long life of the emplacement, detailed final design details are prepared progressively and are therefore not outlined in this plan for Stage 4. Emplacement of coal wash in Stage 3 is currently underway. The Stage 4 CWEA is scheduled to commence in approximately ten (10) years.	In Control	Detailed design plans are not yet available. Stage 4 construction is still at least 10 years away.	
Emplacement Design and Staging	4.1	The maximum design parameters for Stage 3 are: * No more than 60.5 ha of native vegetation to be cleared	In Control	Area cleared to date for Stage 3 is ~40Ha. 2021 clearing will add an additional 2.5 ha onto this total once complete.	
Emplacement Design and Staging	4.1	The maximum design parameters for Stage 4 of the emplacement design are: * volume of 26Mt; * height of 331 m AHD; * footprint that retains the existing Brennans Creek Dam storage capacity and stockpile areas (refer to Plan 1); and * maximum of 60ha of native vegetation clearance.	In Control	Detailed design plans are not yet available. Stage 4 construction is still at least 10 years away.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Emplacement Design and Staging	4.1	Measures to limit the clearing of native vegetation to no more than 60 ha will include: <ul style="list-style-type: none"> • survey and demarcation of the Stage 4 boundary prior to clearing works by a qualified surveyor; • Stage 4 boundary will be clearly outlined on site plans and plans will be provided to clearance contractors; • pre-clearing survey will be undertaken by Specialist Environment who will be trained appropriately in survey methodology (training provided by external consultancy) or a specialist consultant. The area to be cleared will be clearly demarcated with flagging tape. Boundary markings will be placed in a way to ensure that each marker is within line of site. 	In Control	Detailed design plans are not yet available. Stage 4 construction is still at least 10 years away.	
Emplacement Design and Staging	4.1	The Stage 3 valley will be filled in a north westerly direction and Stage 4 from the eastern (or upstream/upslope) boundary and progress in corridors from east to west down the valley, as required by EPBC Approval Condition 6 (d).	In Control	As verified on Arc GIS. Stage 3 is progressing in NW direction.	
Emplacement Design and Staging	4.1	Coal wash will be deposited in benches across the valley (in the case of Stage 4 which will be north-south) and progressively down the valley from east to west.	In Control	Stage 4 not yet commenced. Stage 3 is being deposited in benches across the valley.	
Emplacement Design and Staging	4.1	As each section of fill reaches the designed height, it is top soiled and revegetated. The final landform created by the CWEA will be sympathetic with the regional morphology and will be largely masked from public view by the visual screening of existing eucalypt forest.	In Control	Morphology is as per approved design plans. The completed emplacement is topsoiled and revegetated progressively.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Emplacement Design and Staging	4.1	CWEA construction and operations will be conducted in accordance with the final detailed engineering drawings prepared for each CWEA. The Stage 3 and 4 final landform concept designs are illustrated on Plan 2 and Plan 3.	In Control	Routine surveys and a desktop review on Arc GIS suggests the Stage 3 construction is consistent with the design plans.	
Emplacement Design and Staging	4.1	The engineering drawings for the Stage 4 CWEA will be prepared prior to implementation of the Stage 4 CWEA and these plans will show staging of the emplacement and will comply with Condition 17 (a) and (b) of the Project Approval and Condition 6(b) of the EPBC Approval.	In Control After Action Close-out	To be incorporated into the Stage 4 design plans when available	Design plans to comply with Condition 17 (a) and (b) and Condition 6 of the EPBC approval.
Emplacement Design and Staging	4.1	Plan 4 shows a preliminary concept staging plan that provides for the progressive staging of the Stage 4 CWEA to keep the minimum 100 m wide habitat corridor to link the <i>Persoonia hirsuta</i> core population with habitat north of the Stage 4 CWEA, as required by Condition 6(b) of the EPBC Act Approval.	In Control After Action Close-out	To be incorporated into the Stage 4 design plans when available	Design plans to comply with this condition.
Emplacement Design and Staging	4.1	The Stage 4 Design Plans will be implemented and remain in place for at least ten years, unless otherwise agreed to in writing by the Minister of DAWE, at which point a revised plan taking into account the monitoring referred to above must be submitted to and approved by the Minister.	In Control	Condition not triggered. Stage 4 design plans are not yet initiated

Management Plan Version 5

Erosion and Sediment Control Measures for Emplacement Catch Ponds	4.2.7.3	Each pond must be operational prior to commencement of coal wash emplacement in the catchment area for that pond. As each phase approaches completion and filling of the first pond is imminent, a new pond is to be constructed downstream, prior to the emplacement encroaching on the upstream pond. Emplacement pond dam walls will be constructed using coal wash or site won material excavated (sandstone, coal wash or other appropriate material) from prepared active emplacement areas or other suitable areas.	In Control	Stage 3 emplacement is approaching Emplacement Pond 2. No new ponds were created in FY21.	
Preparation of Active Emplacement Areas	4.2.8.1	Preparation of active emplacement areas will take place progressively as the emplacement advances down Brennans Creek Valley.	In Control	As per CWEAMP rehabilitation program.	
Preparation of Active Emplacement Areas	4.2.8.1	The area of land cleared and dedicated as the active emplacement area will be restricted to an operational size of 18 ha (where practical, with a maximum area of 21 ha) in order for the emplacement ponds to effectively treat surface flows.	In Control	As per last desktop review, active emplacement area is within limits. Emplacement Area at 18.59 ha at time of desktop review (1/08/2021). Western face of emplacement currently being covered by topsoil with an additional 2.5 ha to be added once 2021 clearing is completed.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Preparation of Active Emplacement Areas	4.2.8.1	In general, stripped topsoil will be placed on finished emplacement areas and stripped sandstone/bedrock will be used onsite for emplacement pond dam wall construction. This may require temporary stockpiling of stripped topsoil and sandstone material and appropriate mitigative measures will be undertaken to minimise the effects of erosion and sediment runoff. Stage 4 of the CWEA has a design footprint of 59.4 ha as shown in Plan 3.	In Control	As per CWEAMP rehabilitation program.	
Vegetation and Topsoil Removal	4.2.8.3	All vegetation including shrubs, trees and roots shall be cleared from the active emplacement area using the two-stage clearing process before coal wash emplacement commences. Refer to Section 6 for more detail on vegetation removal. Loose vegetation from site clearing, such as tree branches, shall be used as mulch or brush matting over areas of the CWEA being rehabilitated. Soil will be stripped from areas cleared for coal wash emplacement and where practicable, the seed rich surface layer of topsoil shall be separated from lower level soils. Stripped soil will be applied to a depth of typically 0.5 m (where appropriate) over completed areas of the emplacement as soon as practical. When seed rich topsoil stripped from cleared areas is available it will be spread as the surface layer on emplacement areas being rehabilitated. Seed rich topsoil is to be reused as quickly as possible to maintain viability of seeds.	In Control	As per CWEAMP rehabilitation program.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Vegetation and Topsoil Removal	4.2.8.3	When the emplacement is progressing to its final stages, particular attention must be paid to stockpiling the necessary volumes of soil to ensure adequate soil cover is achieved during rehabilitation of the final landform. Where required, suitable material may be sourced from off-site locations to supplement on-site material where deficiencies are identified.	In Control After Action Close-out	A Biodiversity Risk Assessment was completed in April 2020 which looked at "topsoil deficit" and identified actions to reduce the risk of a topsoil shortfall.	Incorporate topsoil stockpiling into the design planning for Stage 4 (include a topsoil inventory for Stage 4). Investigate other options for sourcing alternative material and progress required approvals.
Emplacement of Coal Wash in Active Emplacement	4.2.9.1	Active emplacement areas will be revegetated as soon as possible after the final emplacement design level has been reached.	In Control	Rehabilitation is undertaken progressively.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Coal Wash Transportation	4.2.9.3	<p>The following procedures must be adhered to with regard to transportation of coal wash associated with the emplacement operations:</p> <ul style="list-style-type: none"> • coal wash shall be transported in trucks on the mine site; • coal wash trucks shall be restricted to designated haul roads on the mine site; • coal wash haul roads shall be designed in accordance with the haul road design guidelines in this management plan (see Section 4.2.3.3); • coal wash haul roads must drain to contaminated water catchments and have standard berms installed; • coal wash haul roads must be maintained to minimise airborne dust; • only dump trucks shall be permitted on the emplacement area (semi-trailers shall only be permitted on areas of the emplacement that have been specially prepared for their access); • dump trucks will be speed restricted to an appropriate speed to meet the site requirements; and • all haul trucks must adhere to site speed limits to maintain operational safety and minimise dust impacts. 	In Control	<p>The procedures governing the transportation of coal wash associated with the emplacement operations are consistent with the Management Plan. In field verification is undertaken as required.</p>	
Coal Wash Transportation	4.2.9.3	<p>Coal wash transport will comply with the safety and operational conditions of the West Cliff Surface Transport Management Plan (Document Number: WCPMP0012), Stockpile and Slope Stability Management Plan (Document Number: WCPMP0001), and the Road Maintenance Manual (Document Number: WCPM0004).</p>	In Control		

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Coal Wash Tipping	4.2.9.4	<p>A tipping area is provided on each active coal wash bench for haul trucks to tip their loads onto the bench. There are currently eight different materials which are required to be placed in a controlled manner into the emplacement.</p> <p>The tipping areas must be set up to handle all eight materials, each of which have different characteristics:</p> <ul style="list-style-type: none"> • DCPP coal wash; • WCCPP coal wash; • belt press fines from the WCCPP; • oversize stone (Big Rock) from the WCCPP; • thickener sludge from the WCCPP; • drilling muds, waters and drill cuttings from IMC exploration and methane drainage programs; • inert waste (including concrete and soil) and virgin excavated natural material (VENM); and • sump/dam clean out materials. 	In Control	Tipping areas are set out on individual benches for approved materials as outlined in the Management Plan. In field verification is undertaken as required.	
Coal Wash Tipping	4.2.9.4	The Material Acceptance Form must be completed and approved prior to the transport of any material not generated by the WCCPP or DCPP to the emplacement for use or disposal.	In Control	Material Acceptance Forms are completed as required.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Coal Wash Tipping	4.2.9.4	<p>Each area is prepared in such a way that allows safe operation of mobile equipment while accessing the area for tipping. This includes:</p> <ul style="list-style-type: none"> • adequate areas and lighting for night time operations; • berms in place; • signage marking tip areas; • allowance for drainage; • surfaces suitable for dump trucks and other approved surface mobile equipment; and • surfaces suitable for tankers around sludge ponds. 	In Control	<p>Each area is prepared in such a way that allows safe operation of mobile equipment while accessing the area for tipping as outlined in the Management Plan. In field verification is undertaken as required.</p>	
Coal Wash Tipping	4.2.9.4	<p>The Contract Supervisor for the CWEA operations is responsible for ensuring required inspections are undertaken. The adequacy of these inspection records will be checked by IMC personnel on a periodic basis (nominally annually).</p>	In Control	<p>Required inspections are undertaken.</p> <p>In field verification is undertaken as required.</p>	
Coal Wash Drying	4.2.9.5	<p>If the moisture content of coal wash delivered to the emplacement area is too high for satisfactory compaction it will be left to dry naturally until suitable moisture content for compaction is reached.</p>	In Control	<p>Coal wash that is delivered to the emplacement area that has a high moisture content is left to dry naturally as outlined in the Management Plan.</p> <p>In field verification is undertaken as required.</p>	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Coal Wash Drying	4.2.9.5	Coal wash slimes/fines will be tipped into shallow temporary drying basins (i.e. sludge ponds) constructed with coarse coal wash. Temporary drying basins will be carefully located on the emplacement area well away from the embankment face and perimeter drains. No surface drainage will be permitted to enter a temporary drying basin.	In Control	Coal wash slimes/fines are handled as outlined in the Management Plan. In field verification is undertaken as required.	
Compaction	4.2.9.6	Coal wash will be spread from tipped heaps and where necessary compacted with vibratory rollers. Fine coal wash will be combined with coarse coal wash in the spreading and compaction operation. Material from temporary drying basins will be placed and compacted into the emplacement in a similar manner to fine coal wash.	In Control	Tipping methods allow for the adequate mixing of coarse and fine coal wash materials. Confirmed by positive results from compaction testing.	
Compaction	4.2.9.6	The Emplacement Supervisor manages the deposition of coal wash and is required to balance available areas for deposition, volumes and material types and compaction results.	In Control	Emplacement Supervisor manages and balances coal wash deposition as outlined in the Management Plan. <u>In field verification undergone as</u>	
Compaction	4.2.9.6	The developing emplacement benches shall be graded back into the valley to prevent surface water flowing over the front batter of the bench.	In Control	Benches constructed as outlined in the Management Plan. In field verification undertaken as required.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Compaction	4.2.9.6	Compaction testing is nominally carried out ten times per year with each testing campaign comprised of at least five representative samples. The compaction testing tests for Standard Maximum Dry Density (SMDD) and the results are compared with a compaction criterion of 95% Standard Compaction. The tests are carried out by a Geotechnical consultant at test locations selected by the Contract Supervisor for the emplacement operations.	In Control	Records of compaction tests are maintained by the emplacement contractor.	
Compaction	4.2.9.6	A record of the test results and locations of where they have been taken shall be maintained in the document management system.	In Control	Records of compaction tests are maintained by the emplacement contractor. Desktop verification undertaken as required.	
Bench Heights	4.2.9.7	Coal wash emplacement will progress in a series of filled horizontal benches until each active emplacement area reaches its finished height. Coal wash benches will extend down the valley in a repetitive sequence of tipping, spreading, and compacting. Coal wash material that is too wet to be emplaced immediately will be placed in temporary drying ponds, which will be located within the emplacement footprint.	In Control	Emplacement operations undertaken as outlined in the Management Plan. In field verification undertaken as required.	
Bench Heights	4.2.9.7	Coal wash emplacement in the valley shall commence at the lower end of the prepared active emplacement area and progress in a series of filled horizontal benches until the emplacement reaches the finished height. Coal wash shall be deposited on the benches and compacted in layers as shown in Figure 1 to achieve better than 95% dry density ratio.	In Control	Emplacement operations undertaken as outlined in the Management Plan. In field verification undertaken as required.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Bench Heights	4.2.9.7	The developing benches will be graded back into the valley to prevent surface water flowing over the front batter of the bench and operations will generally aim to maintain coal wash benches with a 30 m lift as outlined in Figure 1.	In Control	Emplacement operations undertaken as outlined in the Management Plan. In field verification undertaken as required.	
Bench Heights	4.2.9.7	The vertical height of a bench is measured at its highest point or crest and at the bench toe. A bench is established in four distinct stages and must be built with the materials' natural angle of repose forming the maximum angle or slope. Any under-cut which increases this angle must be avoided and rectified before tipping can proceed on top of the bench. The procedure for constructing the benches is as follows: <ul style="list-style-type: none"> • each layer of coal wash is pushed off with the dozer; • depending on material type and compaction already achieved, a vibratory roller is used to further compact the coal wash; edges of the bench are further rolled providing increased compaction; • surface gradient of the bench top is provided to facilitate quick water run off for rain events; and • surface contour drains are provided at intervals and a new bench is started. The contour surface drains must have a gradient that allows surface water to be discharged quickly. 	In Control	Emplacement benches established as outlined in the Management Plan. In field verification undertaken as required.	
Bench Heights	4.2.9.7	Best practice at the CWEA has limited bench heights to 30 m. This height can only be exceeded following a formal risk assessment which involves suitably qualified personnel other than the contractor or persons normally supervising the work.	In Control	Bench heights of 30 m are not exceeded in the CWEA. This is verified annually by external geotechnical inspections.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Bench Heights	4.2.9.7	The surface shape of the CWEA will be finished to blend with the surrounding landform (as per the approved final landform) and provide for non-eroding table drains to carry surface water runoff to the emplacement perimeter drains. Batter slopes on the finished emplacement will be constructed to non-eroding grades where practical in accordance with the approved finished profile design contours. This profile has been designed to a maximum grade of 1(V):3(H) to prevent erosion and sediment runoff. Suitable erosion control methods will be adapted as necessary.	In Control	The finished landform is as per approved design plans in the CWEA MP.	
Redirect Coal Wash to Beneficial Uses	4.2.12	IMC has committed to pursuing alternative uses for coal wash as part of the Project Approval and the Dendrobium Mine Development Consent. This commitment is demonstrated from the continuing work in this area, including researching new technologies which would enable beneficial coal wash uses.	In Control	Beneficial uses of coal wash continue to be investigated. Due to COVID, the volume of coal wash from the DCPD able to be directed to beneficial use was reduced.	
Cultural Heritage Management	5.1	Detailed design plans which include options for reducing, avoiding and/or managing impacts on Aboriginal heritage sites in and adjacent to the southwestern fringe of the proposed Stage 4 footprint (including sites 52-2-2228/3617, 52-2-1373, 52-2-3533/3613 and 52-2-3506);	In Control	Stage 4 not yet commenced	
Cultural Heritage Management	5.1	Management strategies to ensure no impacts to Aboriginal heritage site 52-2-3505 other than negligible impacts, including consideration of potential staged development of the emplacement and/or buffer areas.	In Control	Emplacement is at least 10 years away from this location. The site is also buffered by the Brennans Creek Diversion Channel.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Management and Mitigation	5.7	There are 13 cultural heritage sites within the CWEA that will require some form of management. Refer to Appendix 3.	In Control	Cultural heritage is managed as per the approved CWEAMP.	
Management and Mitigation	5.7	For sites located within the boundaries of the proposed Stage 4 CWEA, the proposed management approach is to conduct detailed recording and, where appropriate, archaeological salvage of a sample of occupation deposit. This strategy is consistent with that successfully employed for the Stage 3 CWEA.	In Control	Cultural heritage is managed as per the approved CWEAMP.	
Management and Mitigation	5.7	For sites avoided by the emplacement footprint, but located in close proximity, proposed management includes conducting detailed recording of the site prior to works in the vicinity, and demarcation of the site to minimize the potential for accidental impacts from mobile machinery working in the area.	In Control	Cultural heritage is managed as per the approved CWEAMP.	
Management and Mitigation	5.7	Detail and scheduling of these management strategies should be developed in consultation with the Aboriginal community through the AHP process.	In Control	Cultural heritage is managed as per the approved CWEAMP.	
Vegetation and Fauna Management	6.1.1	The unit of vegetation to be cleared will be surveyed by appropriately qualified personnel (suitably trained Environmental Representative or specialist consultant) and marked out using flagging tape.	In Control	Relevant site personnel have been trained	
Vegetation and Fauna Management	6.1.1	Surveys of each unit will involve traversing the study area to locate, record and mark specific habitat features that are proposed for preservation and redistribution to the emplacement (e.g. rocks and boulders, stags and large hollows).	In Control	Pre-clearance inspections are undertaken as required.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Vegetation and Fauna Management	6.1.1	Prior to any vegetation clearance occurring on site, specific details including the type and number of each habitat feature will be clearly recorded and identified on a pre-clearing checklist. Clearance will only occur following demarcation and survey by appropriately qualified personnel.	In Control	Pre-clearance inspections are undertaken as required.	
Vegetation and Fauna Management	6.1.1	The survey will identify appropriate candidate boulders and outcrop rock that could be translocated for habitat creation in revegetated areas. Boulders shall be placed on top of replaced soils (on top of the CWEA) to recreate habitat for species dependent on rocky outcrops, such as the Broad-headed Snake.	In Control	Pre-clearance inspections are undertaken as required and suitable boulders identified.	
Vegetation and Fauna Management	6.1.1	During the pre-clearance survey, habitat features within each unit will be inspected in order to identify the need for any relocation of resident fauna species. Relocation of fauna will also involve the identification of capture and release methods and release areas for the relocation of fauna species prior to clearing.	In Control	Pre-clearance inspections are undertaken as required. No relocations were required in FY21.	
Permit to Disturb	6.1.2	Prior to any vegetation clearance occurring on site, a Permit to Disturb (ICHF0209) is to be issued. Specific details including the type and number of each habitat feature will be clearly recorded and identified on Permits to Disturb prior to issue. Permits to Disturb will only be issued following demarcation and survey by the Environmental Representative.	In Control	Permits to Disturb are completed as required.	
Permit to Disturb	6.1.2	A post-clearing inspection will be undertaken by the site Environmental Representative to verify the clearing was done in accordance with the Permit to Disturb.	In Control	Permits to Disturb are completed as required.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Permit to Disturb	6.1.2	If unapproved clearing goes beyond the emplacement boundary: <ul style="list-style-type: none"> • the incident will be reported in accordance with the Environmental Compliance/Conformance Assessment and Reporting Procedure (IMCP0186); and • the disturbed area will be rehabilitated as soon as practicable. 	In Control	Not triggered	
Clearing Process - Timing	6.2.1	Where possible, the timing of vegetation clearance of important habitat features will be between January and May to avoid the primary breeding and nesting periods of most hollow-dwelling species.	In Control	The last emplacement clearing permit was issued in January 2021. However, due to other site projects taking priority use of site excavators, the 1st stage clearing work had not commenced until July 2021.	
Two-Stage Clearing	6.2.2	Where possible, (i.e. where access to trees by the excavator is safe and practical), clearing of hollow bearing trees will be performed in a two-stage process where surrounding vegetation is cleared separately, before the removal of habitat trees to allow fauna an opportunity to move.	In Control	Two stage clearing undertaken as required and as per requirements of the pre-clearing assessment report that is issued to the contractor before clearing can take place.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Injured Animals	6.2.2.3	The general practice of dealing with injured or captured fauna will be for the site operators to notify the site Environmental Representative who will arrange for fauna rescue or veterinary treatment. If the site Environmental Representative is not present when an injured or juvenile animal is found, the following steps will be implemented: <ul style="list-style-type: none"> • cover animal with a towel or blanket to minimise stress and place in an appropriate hessian or cloth bag; • move animal to designated holding area; and • contact the local animal welfare group or veterinarian immediately 	In Control	Not triggered	
Stockpiling	6.2.3	Vegetation shall be removed from the area in stages and stockpiled adjacent to the clearing.	In Control	Stockpiling is avoided where possible. Material is preferentially translocated directly to the areas being rehabilitated.	
Stockpiling	6.2.3	Rocks and logs are to be redistributed to the recipient sites (as per the Permit to Disturb). Large boulders and stags which require partial soil cover to be secured in place will be moved to the recipient sites prior to soil translocation.	In Control	Rocks and logs are collected. Large boulders and stags are relocated as required where identified.	
Stockpiling	6.2.3	Where practical, soil stockpiling will be avoided, and stripped soil layers will be immediately redistributed to the donor sites. Soils will not be stockpiled for long periods of time. Soil horizons will not be removed during or immediately following rain to minimise the composting process during stockpiling.	In Control	Stockpiling is avoided where possible. Material is preferentially translocated directly to the areas being rehabilitated.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Stripping of soil horizons	6.2.4	Topsoil from the donor site will be stripped from the surface in layers. The most valuable layer is the top 50 mm of soil which contains the majority of soil stored seed and propagules, plant nutrients and beneficial soil microbes. The top 50 mm of soil will be stripped and mixed with the cleared vegetation and stockpiled adjacent to or on the selected and pre-prepared recipient site ready for spreading.	In Control	Topsoil stripping and placement is undertaken as detailed. The success of this methodology is noted in the CWEA monitoring report.	
Stripping of soil horizons	6.2.4	Stripping and stockpiling of subsoil horizons will be undertaken depending on depth of bedrock. Where possible the depth of subsoil removal should exceed 500 mm. Subsoil layers will then be translocated to the recipient sites.	In Control	Subsoil stripping and placement is undertaken as detailed.	
Progressive Rehabilitation	6.3.1	Rehabilitation of the emplacement surface will take place progressively as each section of embankment fill reaches the finished level. Completed sections of the emplacement will be trimmed to even grades, and spread with approximately 0.5 m of soil (including subsoil and topsoil).	In Control	Progressive rehabilitation is undertaken.	
Progressive Rehabilitation	6.3.1	Habitat reinstatement techniques such as transplanting dead stags, addition of habitat logs and woody debris, nest box use and installation reconstruction of rock outcrops will be undertaken as described.	In Control	Progressive rehabilitation is undertaken.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Landform Design	6.3.2	The surface of the emplacement will be reshaped in order to mimic micro-topographic features. Where possible, more natural concave slope profiles and slope angles will be used to limit the loss of sediment off the slope. The finished surface profile of the CWEA must be in accordance with the approved design contours (refer to Plan 2 and Plan 3).	In Control	Micro-topographic features are built in line with recommendations outlined in the Management Plan. Verified in field on a quarterly basis.	
Translocation of Habitat and Soil	6.3.3.1	To facilitate successful long term plant growth it will be necessary to avoid capillary rise of potential saline seepage from the coal wash. In order to avoid the potential for saline seepage (which can prevent seed germination and retard plant growth), the emplacement will be fully encapsulated by soil horizons to a depth of typically 0.5m where appropriate.	In Control	There is no evidence of capillary rise in the CWEA.	
Translocation of Habitat and Soil	6.3.3.1	Subsoil horizons will first be spread over the allocated recipient sites on the Emplacement surface. Finally, the remaining 50 mm (topsoil) will be spread over on top.	In Control	Soil horizons are spread as required.	
Translocation of Habitat and Soil	6.3.3.2	All remaining stockpiles of rocks, logs and vegetation will then to be redistributed over the recipient site. Avoiding excessive soil compaction is crucial to maximising plant establishment and all traffic should be excluded from the translocated soil horizons once all materials have been spread on the surface. Habitat logs and coarse woody debris from the cleared vegetation will provide microhabitat for fauna and protection for emerging seedlings.	In Control	Stockpiles of rocks, logs ad vegetation are spread as detailed.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Translocation of Habitat and Soil	6.3.3.3	Large hollow bearing trees are numerous within areas proposed for clearing. Selected large hollow bearing trees within each clearance compartment will be transplanted to areas within the rehabilitating emplacement to become standing dead trees (stags). Provision of these dead stags will provide fauna habitat which may otherwise take decades to form. The quantity of dead stags transplanted to the emplacement will aim to mimic the numbers originally present within the cleared compartments.	In Control	Large stags are being identified during the pre-clearance inspections and placed within the rehabilitation areas.	
Translocation of Habitat and Soil	6.3.3.4	To provide suitable habitats for certain fauna species (especially reptiles), relocation of sandstone rock outcrops to the emplacement will be undertaken. The location of rock outcrops will account for the thermoregulatory requirements of reptile fauna by concentrating placement of boulders and exfoliating rocks on westerly aspects of the CWEA.	In Control	Rock outcrops are being constructed as required. Soil capping and habitats are currently being built over the western side of the stage 3 CWEA.	
Translocation of Habitat and Soil	6.3.4	Seed mixes should resemble the local vegetation types (Exposed Sandstone Scribbly Gum Woodland (ESSW) and Sandstone Gully Peppermint Forest (SGPF)) to supplement rehabilitation of the emplacement and associated areas. Seed is harvested by contractors from areas of land within the regional locality, and will be spread over bare areas of the CWEA. Where required (i.e. in areas that remain without any, or poor, natural regeneration for a period longer than six months), supplementary planting of local provenance tubestock will be considered to ensure vegetation is progressively reinstated.	In Control	Seed is sourced from a contractor. It is not always possible to guarantee local seed due to availability in the local areas. Due to health and safety risks associated with seed collection on an active mine site, no seed is formally collected on the mine site and it hasn't been required due to seed being available elsewhere in the region. Supplementary planting has not been required to date.	

BULLI SEAM OPERATIONS
Coal Wash Emplacement Area Management Plan
WCPMP0019
Management Plan Version 5

Translocation of Habitat and Soil	6.3.4	A list of suitable plant species for collection, propagation and installation has been derived from the Species Impact Study species list and is included in Table 5.	In Control	Seed list has been provided to the seeding contractor. Monitoring results suggests revegetation is consistent with the listing provided.	
Weed and Pest Management	6.3.5.1	Weeds and vertebrate pests will be managed as detailed in Table 6.	In Control	Regular slashing has continued as required. No pest management has been required in FY21.	
Bushfire Management	6.3.5.2	Bushfire management at the site will be reviewed once the current <i>Persoonia hirsuta</i> research project findings are completed (which includes ecological burning). The updated bushfire management for the site will also consider the fire ecology of all threatened species at the site. Bushfire trials are being considered on the CWEA, in particular Stage 1 and Stage 2.	In Control	A literature review of bushfire and rehabilitation was undertaken in FY21. The implementation of a trial burn in rehabilitated areas will be investigated and implemented in FY22 if conditions are suitable. The <i>Persoonia</i> Research report was submitted to DAWE in June 2021.	
Rehab Phases, indicators and Completion Criteria	6.3.6	The Appin Mine Mining Operations Plan (that also meets the requirements of Condition 33 of Schedule 4 of the Project Approval for the Appin Mine Rehabilitation Management Plan) summarises the rehabilitation processes for all surface facilities and sites associated with Appin Mine. Table 7 outlines the rehabilitation phases, indicators, objectives and completion criteria for the CWEA.	In Control	Progressive rehabilitation is undertaken to achieve the Completion Criteria. The CWEA Annual Monitoring Report details progress towards meeting these criteria.	
<i>Persoonia hirsuta</i> management strategies	6.4	The Stage 4 conceptual staging plan will facilitate pollination vectors for <i>Persoonia hirsuta</i> across remnant bushland for Corridors 1 through 3 as shown in Plan 4.	In Control	Not yet triggered	Design plans to comply with this Condition

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Water	7.1	Runoff from the active emplacement areas (or areas where the vegetation has not yet been spread) is directed to the emplacement water management system (i.e. Ponds P4, EP2, and EP3) for treatment prior to being gravity fed to BCD.	In Control	Inspections are undertaken to check effective operation of the water management system.	
Water	7.1	As the emplacement construction progresses, a subsurface drainage system is installed in the base of the cleared area. Emplacement under-drainage flows are generally clean. The emplacement under-drainage is pumped to the clean water diversion channel for release into BCD. If required (i.e. if the water is turbid), the underdrainage can be directed into the CWEA dirty water system. Overflow from the CWEA under-drainage system feeds directly to the CWEA water treatment system.	In Control	Underdrainage water quality is monitored monthly via grab samples.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Dust Control	7.2	<p>Dust impacts from emplacement operations will be mitigated by the coal wash material containing moisture from coal washing processes and being compacted once emplaced. Active emplacement areas will be vegetated as soon as is practical after emplacement and revegetated emplacement is typically stable. The following measures are in place to reduce dust emissions associated with emplacement operations:</p> <ul style="list-style-type: none">• regular inspections are undertaken to identify the presence of dry windy conditions and appropriate dust suppression is implemented as necessary early warning weather alerts are received that predict adverse weather conditions and pre-emptive dust controls are implemented where required. A water cart is maintained on site and is used when the surface of the emplacement is dry and airborne dust can be created; and• vehicle speed limits are followed to reduce the risk of dust emissions from unsealed roads due to vehicle movements. <p>Air quality around the CWEA will be monitored by:</p> <ul style="list-style-type: none">• collection and measurement of dust samples from strategically placed dust deposition gauges;• use of real-time air quality monitors; and• dust emission surveys and spot checks using hand-held photometers (as required).	In Control	<p>Watercart is in use on the haul roads and stockpiles.</p> <p>Coal wash is compacted and covered as soon as practicable.</p> <p>Dust deposition gauges were decommissioned in FY21 following consultation with the EPA and DPIE.</p>	
--------------	-----	---	------------	--	--

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Noise Control	7.3	Noise generated on the CWEA is from coal wash haul trucks and earthmoving equipment. The noise impact from these operations is deemed to be minimal as noise is naturally mitigated by the emplacement being located in a valley and at a distance of 1.5 km to 2.5 km from the nearest residential development in Appin. This is confirmed by the quarterly noise monitoring program and the lack of complaints about noise from the site.	In Control	No noise complaints received	
Noise Control	7.3	Noise complaints will continue to be recorded and if a notable increase is identified, IMC will undertake further investigations.	In Control	As per Noise MP	
Visual Impact	7.4	The following measures will be undertaken to minimise impacts on visual amenity due to emplacement operations: <ul style="list-style-type: none"> • the finished level of the CWEA will be in accordance with approval conditions; • the land area dedicated to active emplacement operations will be kept to a minimum (typically 18 ha, maximum 21 ha); • the finished surface of the emplacement will be of a shape which complements and blends, as much as possible, with the surrounding natural landform, as per the approved final landform plans; and • completed sections of the CWEA will be revegetated as soon as possible. 	In Control	The CWEA is constructed as per design. Progressive rehabilitation is undertaken.	
Emplacement Rehabilitation Monitoring	8.1.1.5	Biometric assessments are required annually, starting at 1 year after translocation.	In Control	See last CWEA Monitoring Annual Report.

WCPMP0019

Management Plan Version 5

Emplacement Rehabilitation Monitoring	8.1.1.5	Surveys at control sites only required once every three years and the benchmarks as presented in this report remain so for the ensuing three year period.	In Control	Control sites last monitored in Spring 2020.	
Emplacement Rehabilitation Monitoring	8.1.1.5	Photo point monitoring is required annually and done in conjunction with the biometric assessment.	In Control	Photo points last monitored in 2020. See last CWEA Monitoring Annual Report.	
Emplacement Rehabilitation Monitoring	8.1.1.5	Meanders for threatened plants are undertaken every three years.	In Control	Threatened plant meander undertaken in Spring 2020.	
Emplacement Rehabilitation Monitoring	8.1.1.5	Fauna monitoring using camera traps is required annually, starting 5 years after translocation or as deemed appropriate depending on the maturity of the revegetation.	In Control	Fauna last monitored in Spring 2020. See last CWEA Monitoring Annual Report. Next round of Fauna monitoring to be undertaken Spring 2021.	
Emplacement Monitoring	8.2	Permanent survey control benchmarks are established on stable ground outside the perimeter of the CWEA from which the monitoring stations can be surveyed. Survey heights are taken regularly to determine the appropriate design heights.	In Control	Emplacement contractor achieves finished levels as follows; 1. At regular intervals depending upon the coal wash volumes (up to 6 times per year), a Surveyor provides positive proof of the current levels against the Illawarra Metallurgical Coal approved design. 2. Check of coal wash levels at 500 mm below the finished plan undertaken (allowing for soil placement). 3. Clarification of the emplacement heights and displacement is obtained using InSAR satellite monitoring.

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

<p>Emplacement Monitoring</p>	<p>8.3</p>	<p>Compaction testing is nominally carried out ten times per year. Each testing campaign must take at least five representative samples. Compaction testing will test for SMDD and the results will be compared with a compaction criterion of 95% Standard Compaction. If after testing the compaction results are less than 95% then the fail area must be reworked and re-tested. The fail area shall be isolated from normal emplacement operation until results of re-testing indicate 95% or better compaction.</p>	<p>In Control</p>	<p>Compaction tests undertaken as required. Records are kept by the emplacement contractor on the South32 file storage system.</p>	
<p>Emplacement Monitoring</p>	<p>8.4</p>	<p>Runoff from active emplacement areas or areas where vegetation is not established is directed to the CWEA water management system (i.e. Ponds P4A, EP2 and EP3) for treatment prior to being diverted to BCD. Emplacement under-drainage flows are generally clean but have the potential to be dirty during the first-flush period of a rainfall event, especially after a prolonged dry period. Any first flush flows that are dirty are directed to the CWEA water treatment system (i.e. Ponds P4A, EP2, and EP3). During clean subsurface flows, or once the dirty first flush flows have cleared, emplacement under-drainage is pumped to the clean water diversion channel for release into BCD. The water management system is explained in more detail in the Appin Mine Water Management Plan. Monthly water samples are taken to monitor the quality of the CWEA subsurface drainage.</p>	<p>In Control</p>	<p>Monthly samples collected as required - refer to 14-day Report (Point 16) on South32 website.</p>	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

<p>Emplacement Monitoring</p>	<p>8.5</p>	<p>Erosion and sediment control structures will be regularly inspected to check they are operating satisfactorily and to perform any maintenance work and repairs that may be required. Regular maintenance will include:</p> <ul style="list-style-type: none"> • sediment removal from drains and sediment basins; • installation, proper operation and routine maintenance of any flocculant dosing equipment; • replacement and or repair of sediment control structures as required; and • repair of areas that become unstable following periods of high flow. 	<p>In Control</p>	<p>Monitored as part of quarterly inspection regime by Specialist Environment. Last inspection completed in June 2021.</p>	
<p>Complaints and Non-compliance Management</p>	<p>9.1</p>	<p>Community complaints and enquiries may also be received in person by any employee of IMC, with details to be immediately shared with the Community Team for investigation. All CWEA complaints received in relation to Appin Mine will be managed in accordance with the Handling Community Complaints, Enquiries and Disputes Procedure.</p> <p>Upon receipt of a community complaint, preliminary investigations will commence as soon as practicable to determine the likely cause of the complaint. An initial response will be provided to the complainant within 24 hours of the complaint being made, with a follow up response being provided as soon as practicable once a more detailed investigation is complete.</p>	<p>In Control</p>	<p>No complaints regarding CWEA activities received in FY21.</p>	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

WCPMP0019

Management Plan Version 5

Non-Compliance, Corrective Action and Preventative Action	9.2	Events, non-compliances, corrective actions and preventative actions are managed in accordance with the Reporting and Investigation Standard and Environmental Compliance/Conformance Assessment and Reporting Procedure. These procedures, which relate to all IMC operations, detail the processes to be utilised with respect to event and hazard reporting, investigation and corrective action identification.	In Control	No events or non-compliances relating to CWEA activities were identified in FY21.	
Notification of Pollution Incidents to Government Authorities and the Public	9.3	In accordance with Condition 7 of Schedule 6 of the Project Approval and Condition R2 of EPL 2504, IMC is to notify DPIE, EPA and other relevant agencies of any incident that has caused (or threatens to cause) material harm to the environment.	In Control	No pollution incidents relating to CWEA activities occurred in FY21.	
Reporting and Review	10.1.1	IMC will report on the performance of the CWEAMP in the Annual Review. The Annual Review is prepared in accordance with the requirement of Condition 4 of Schedule 6 of the Project Approval and is submitted to relevant agencies in September each year. Annual Reviews are made available to the general public via the South32 website.	In Control	Annual Review is submitted as required. Copies of previous on the South32 website.	
Reporting and Review	10.1.2	The Emplacement Rehabilitation Monitoring Report is included as an appendix in the Annual Review.	In Control	Report was submitted to DAWE on 21 July 2021.	

BULLI SEAM OPERATIONS

Coal Wash Emplacement Area Management Plan

Management Plan Version 5

Reporting and Review	10.1.3	A summary of the CWEA monitoring results (where applicable), including details of exceedances and non-compliances (as determined in accordance with Section 9.2 of the CWEAMP), will be provided on the South32 website in the 14-day report.	In Control	Report is available on the South32 website.	
Exceedance/non-compliance notifications	10.2	In the event that an exceedance or non-compliance of the relevant air quality, noise or water quality criteria is confirmed, a notification will be made.	In Control	No exceedances or non-compliances associated with the CWEA were identified in FY21.	
Review of CWEAMP	10.3	In accordance with Condition 5 of Schedule 6 of the Project Approval, the CWEAMP will be reviewed, and if necessary revised, within three months, of: <ul style="list-style-type: none"> • the submission of an Annual Review; • the submission of an incident report; • the submission of an Independent Environmental Audit (IEA) report; or • any modification to the conditions of the Project Approval (unless the conditions require otherwise). 	In Control	Last reviewed and approved 12/12/2020 by State government, 28/01/2021 by Federal government. Plan is reviewed post submission of the Annual Review and is currently being revised.	
Independent Environmental Audit	10.4.1	In accordance with Condition 9 of Schedule 6 of the Project Approval, and Condition 18 of the EPBC Approval, an IEA shall be commissioned every three years, that will include a review of the CWEAMP. The report is required to be submitted to the Secretary within six weeks of completion of the audit, in accordance with Condition 10 of Schedule 6. The IEA Report is also required to be submitted to the Minister of DAWE in accordance with Condition 18 of the EPBC Approval within six weeks of completion of the IEA.	In Control	The last IEA was undertaken in 2019. The next IEA is due in 2022.

BioBanking Agreement ID number: 215	Ref.	Requirement / Obligation			
Use of the biobank site General responsibilities	3.1	Except as otherwise permitted by this agreement, the landowner must not carry out any act or omit to carry out any act, or cause or permit any act to be carried out or any act not to be carried out which act or omission may harm biodiversity values on the biobank site, including but not limited to any native animals, native plants, threatened species, populations and ecological communities, and their habitats. NOTE: The clearing of native vegetation that is otherwise permissible in accordance with the NV Act (whether it is permissible under a PVP, routine agricultural management activity (as defined under the NV Act), or is otherwise permitted under Part 3 of that Act) can only be carried out on the biobank site to which this agreement applies if it is also permissible under this agreement. Item 5.1 of the management actions contained in Section 1 of Annexure C sets out the limited circumstances in which native vegetation can be cleared on the biobank site. Annexure C also contains limited exceptions in relation to when a landowner is not required to comply with the management actions contained in Annexure C.	In Control	As per Management Actions comments below.

Update must cover matters as per 3.2. of Section 1. - Ongoing from first payment date	N/A	BioBanking Agreement 215 only made on 1/2/17. The review on the Management plan will occur before the end of the 6th year since commencement - February 2023.	
Standard Management Actions Fire	Section 1	Do not light fires on the Biobank site other than for purposes of ecological burning of if permitted as a permissible activity as per Item 4, Clause 3.6. - Ongoing from commencement date	In Control	No ecological burns are planned in any zone until at least 2026 and then the site will be reconsidered for future ecological burns in a mosaic pattern across the site. Heavy senescence of <i>Acacia</i> spp. (predominantly <i>A. decurrens</i>) in MZ1, MZ2 and MZ7. Fuel loads vary in all management zones but are at least 15 -20 tonnes per hectare or greater across the site. No evidence of recent fire activity during all six site visits (BBA suggests last burn/wildfire was in 2004). Comment from last annual audit by BCT (18/9/19) - Action Completed Satisfactorily - No planned burns required until 2026. No evidence of recent fire activity observed during inspection.
